

AGENDA - Day 2

- Docker: containers and images
- Build images using a Docker file
- Dotnet images
- Docker networking
- Docker compose

Bare Metal

Virtual Machines with Containers

Containers and Images

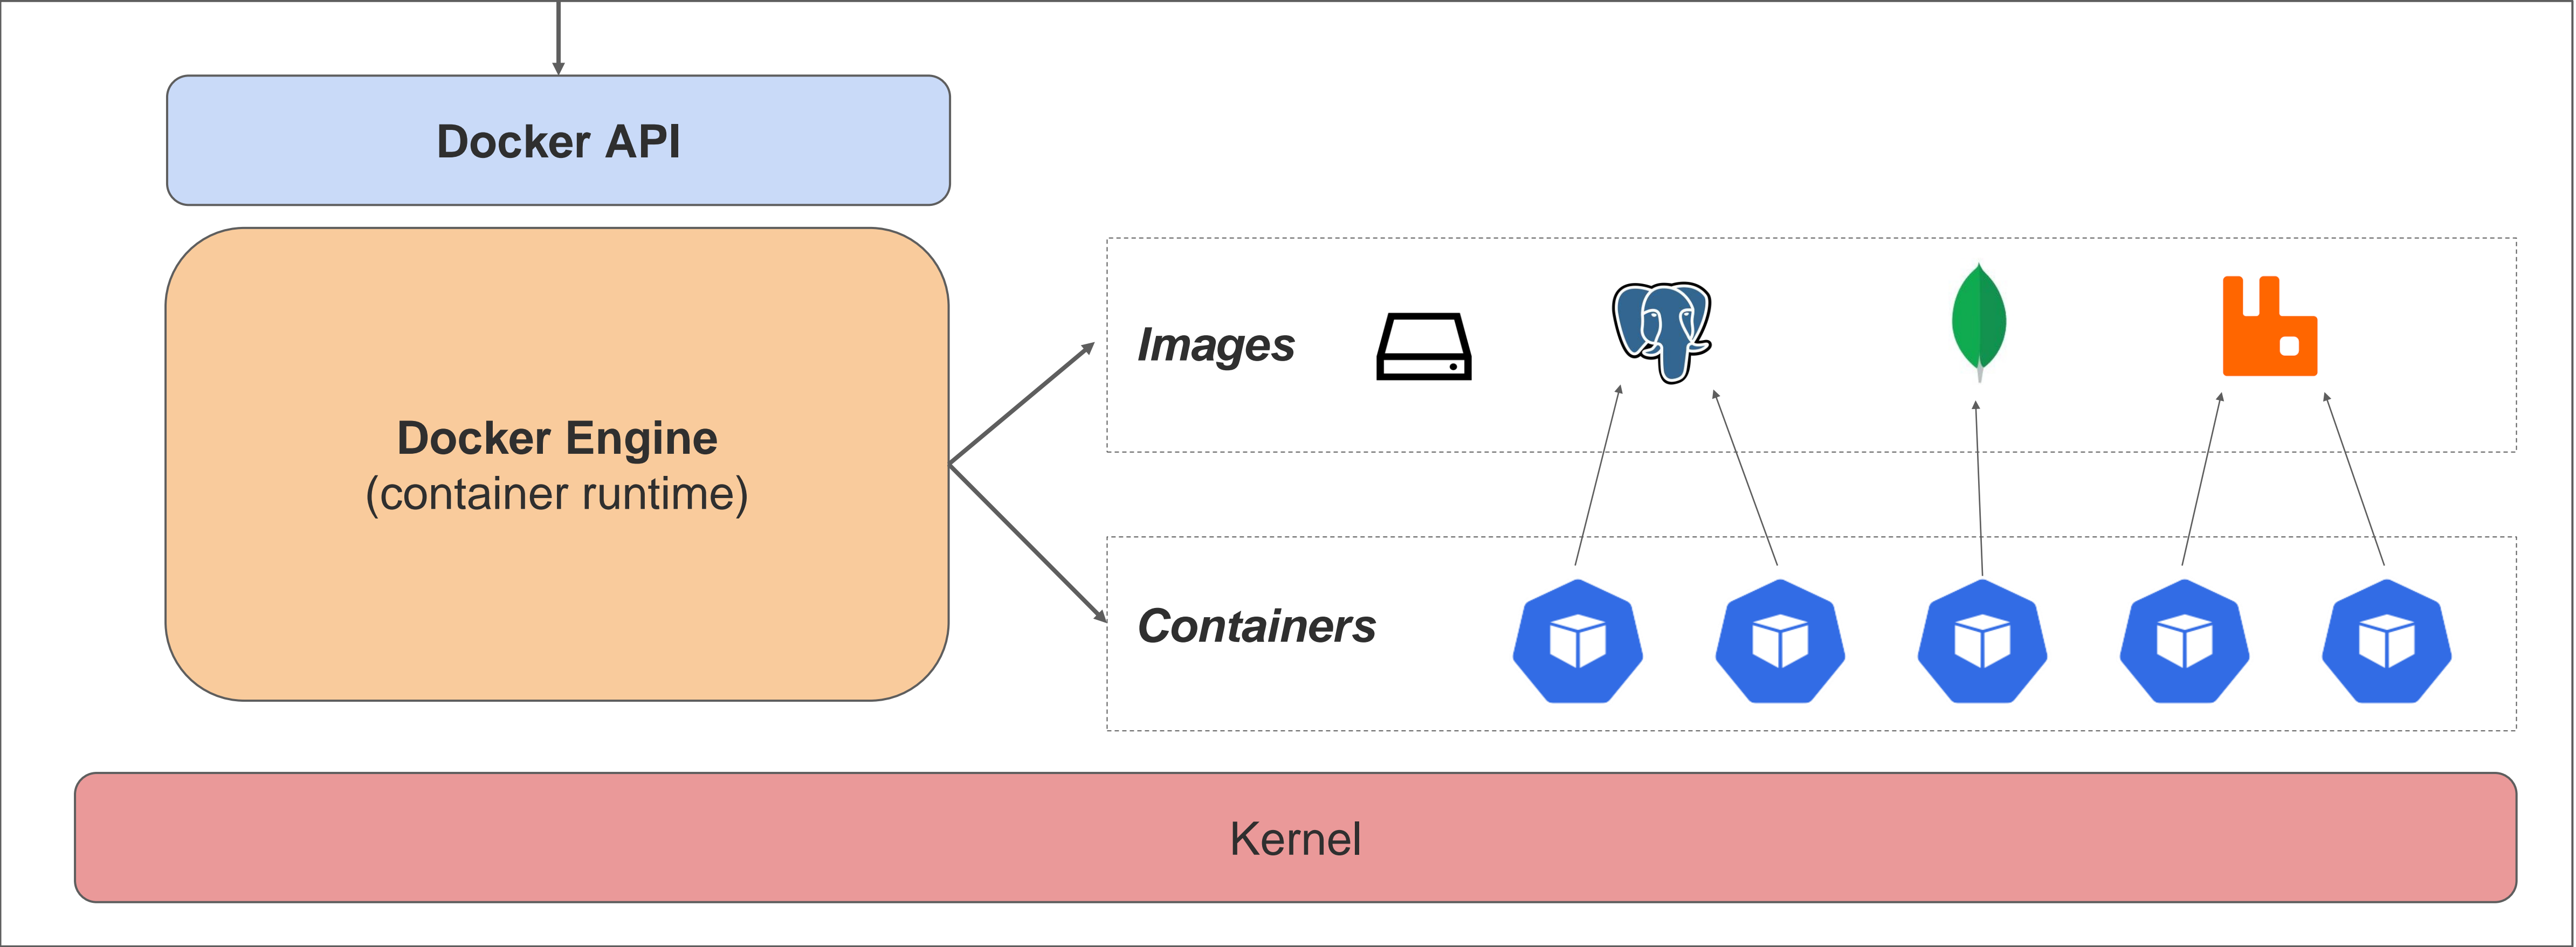

Docker architecture overview

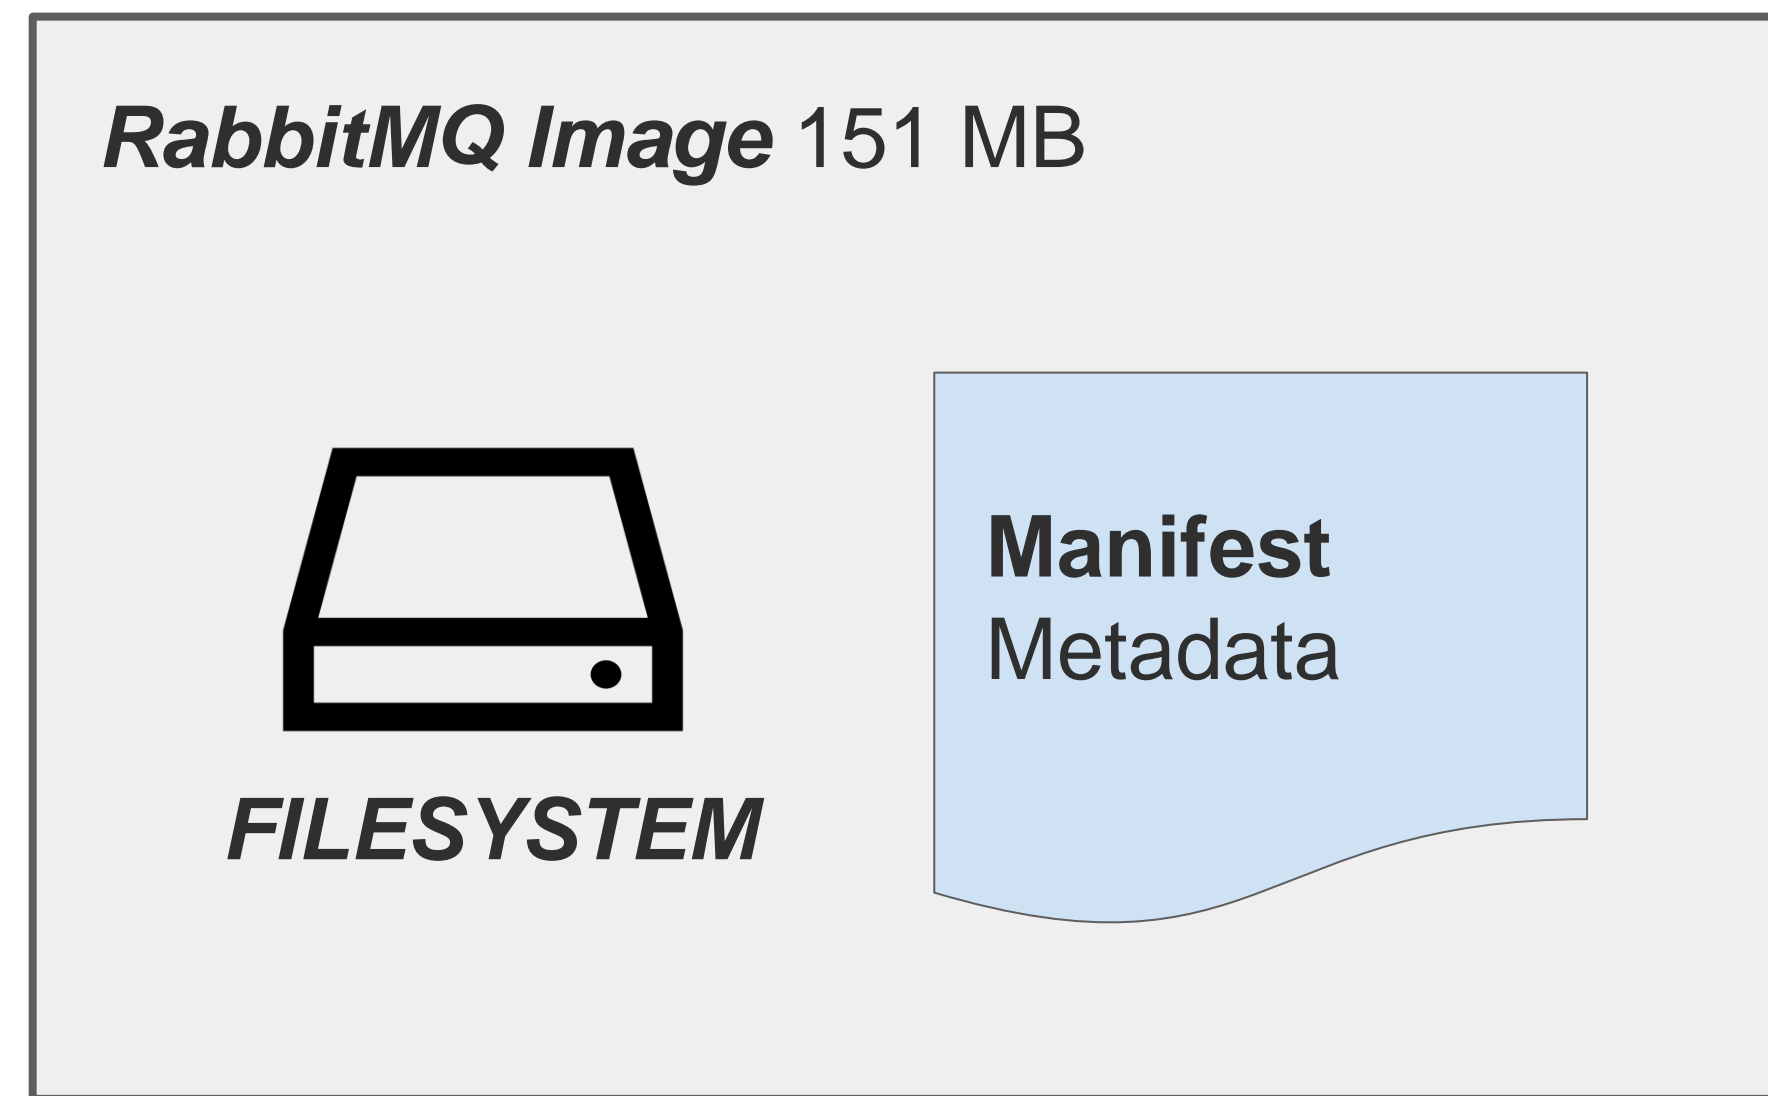

DOCKER CLIENT

```
$ docker run rabbitmq
```

DOCKER HOST

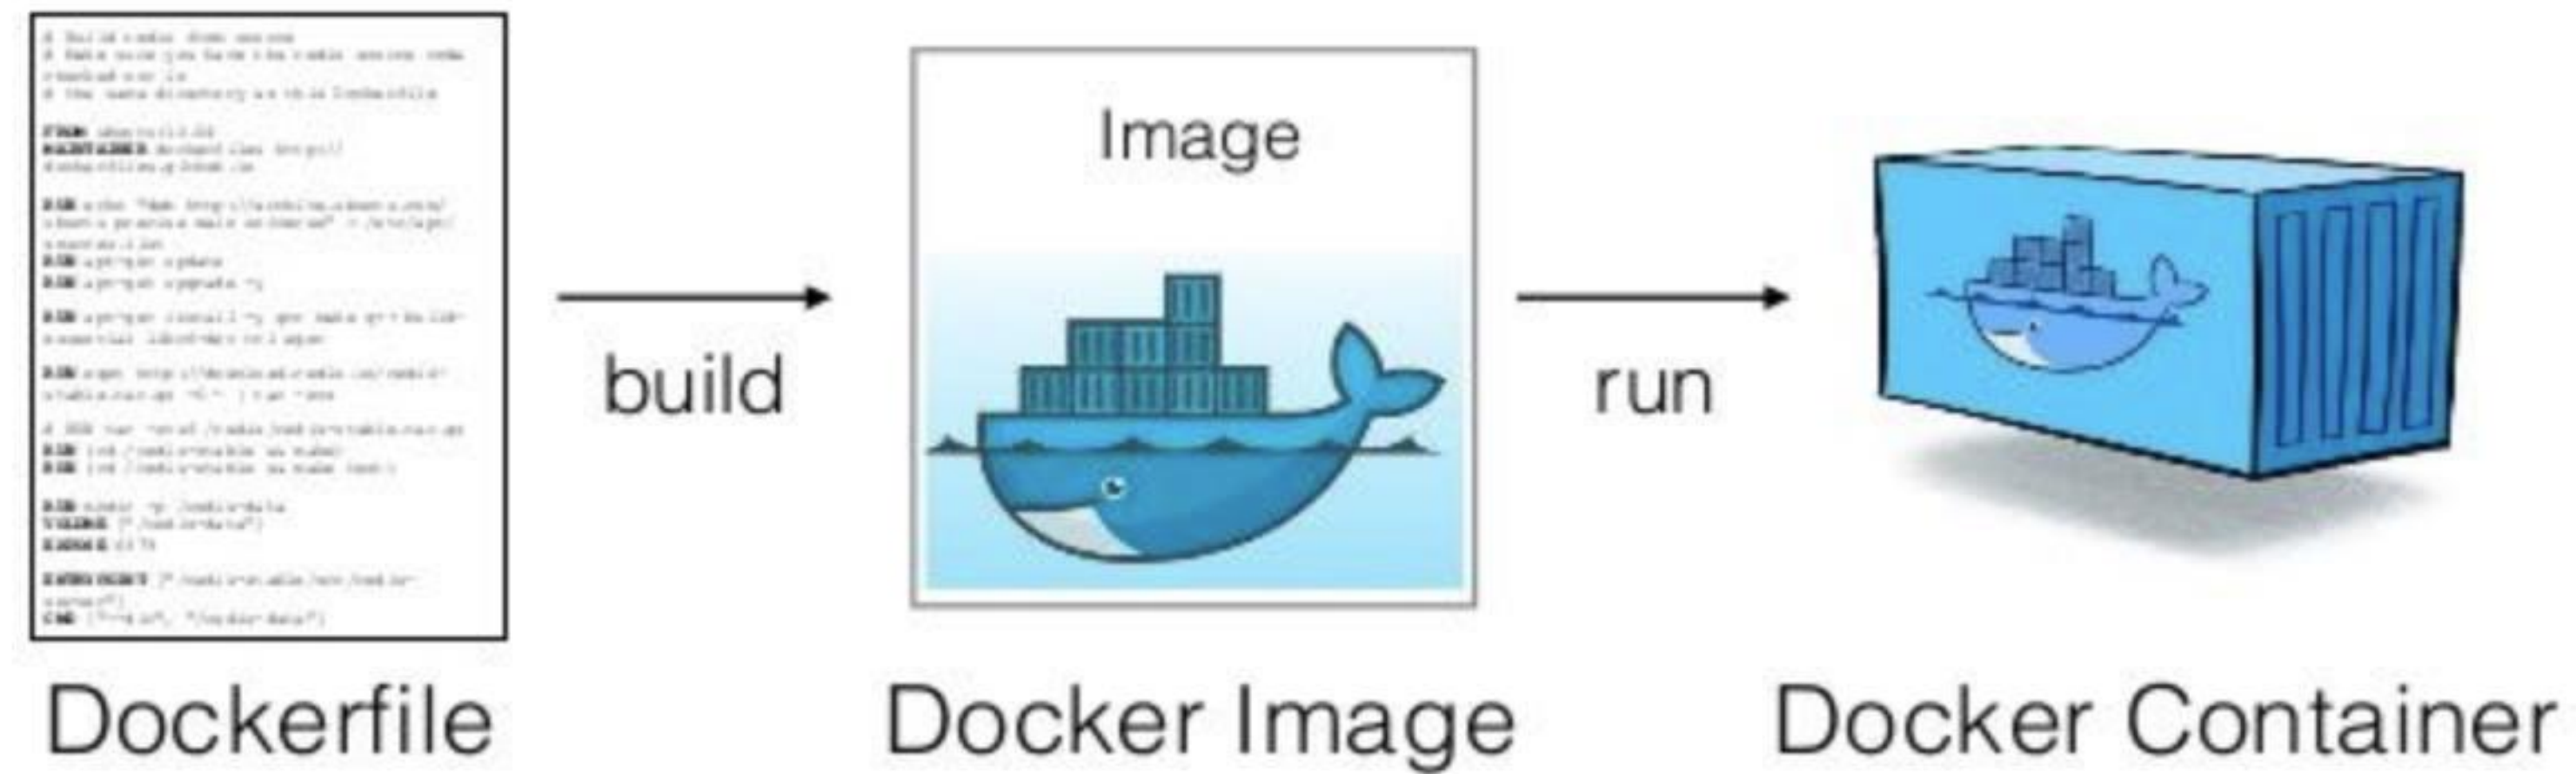

What is a docker image?

<https://hub.docker.com/search>

Docker build with Dockerfile

<https://docs.docker.com/engine/reference/builder/>

https://docs.docker.com/develop/develop-images/dockerfile_best-practices/

Dockerize your app

https://hub.docker.com/_/microsoft-dotnet/

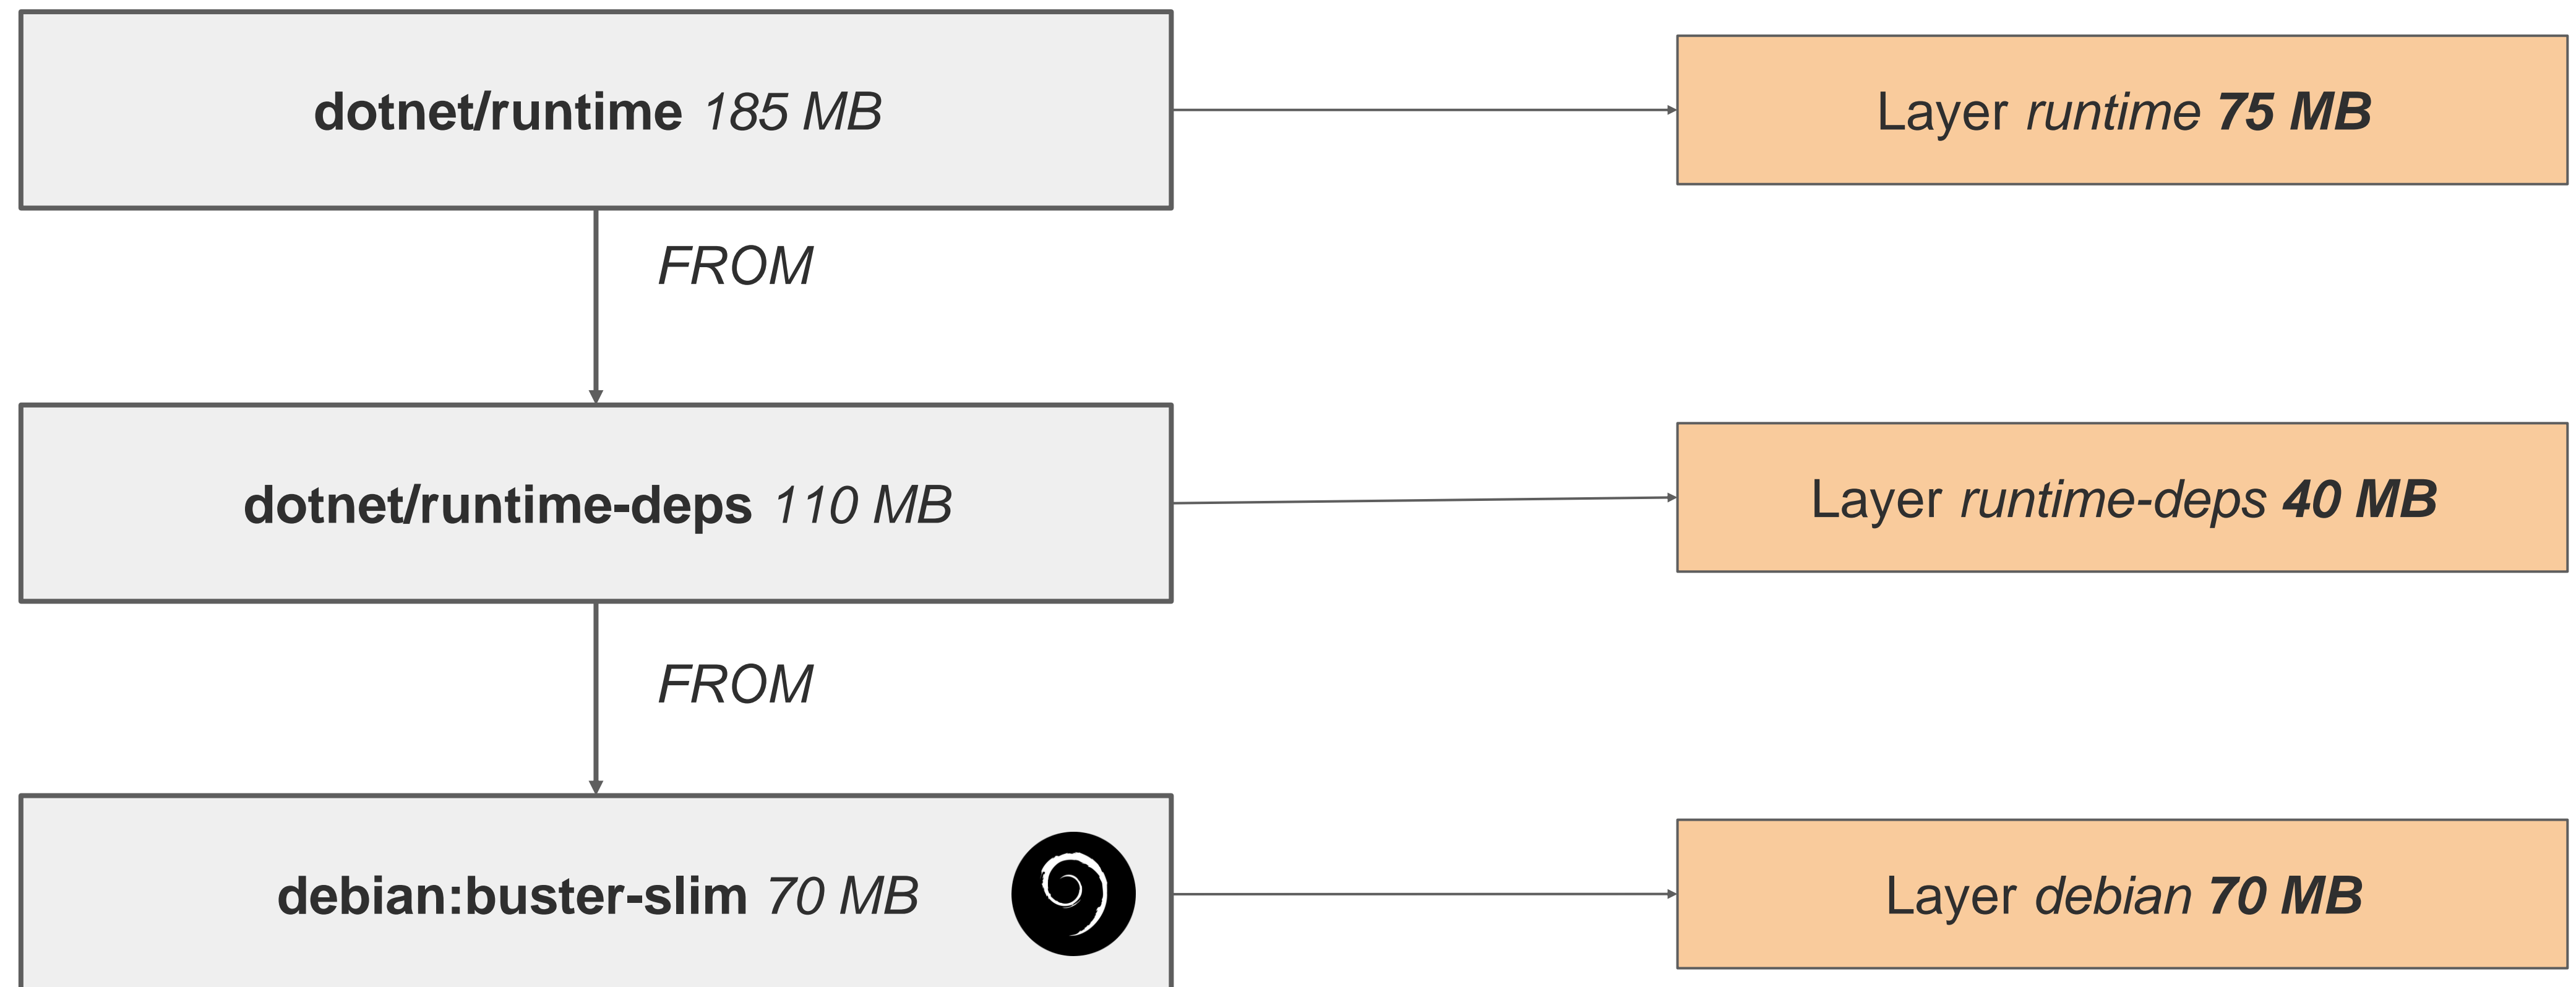

Dockerize your app

<https://github.com/dotnet/dotnet-docker>

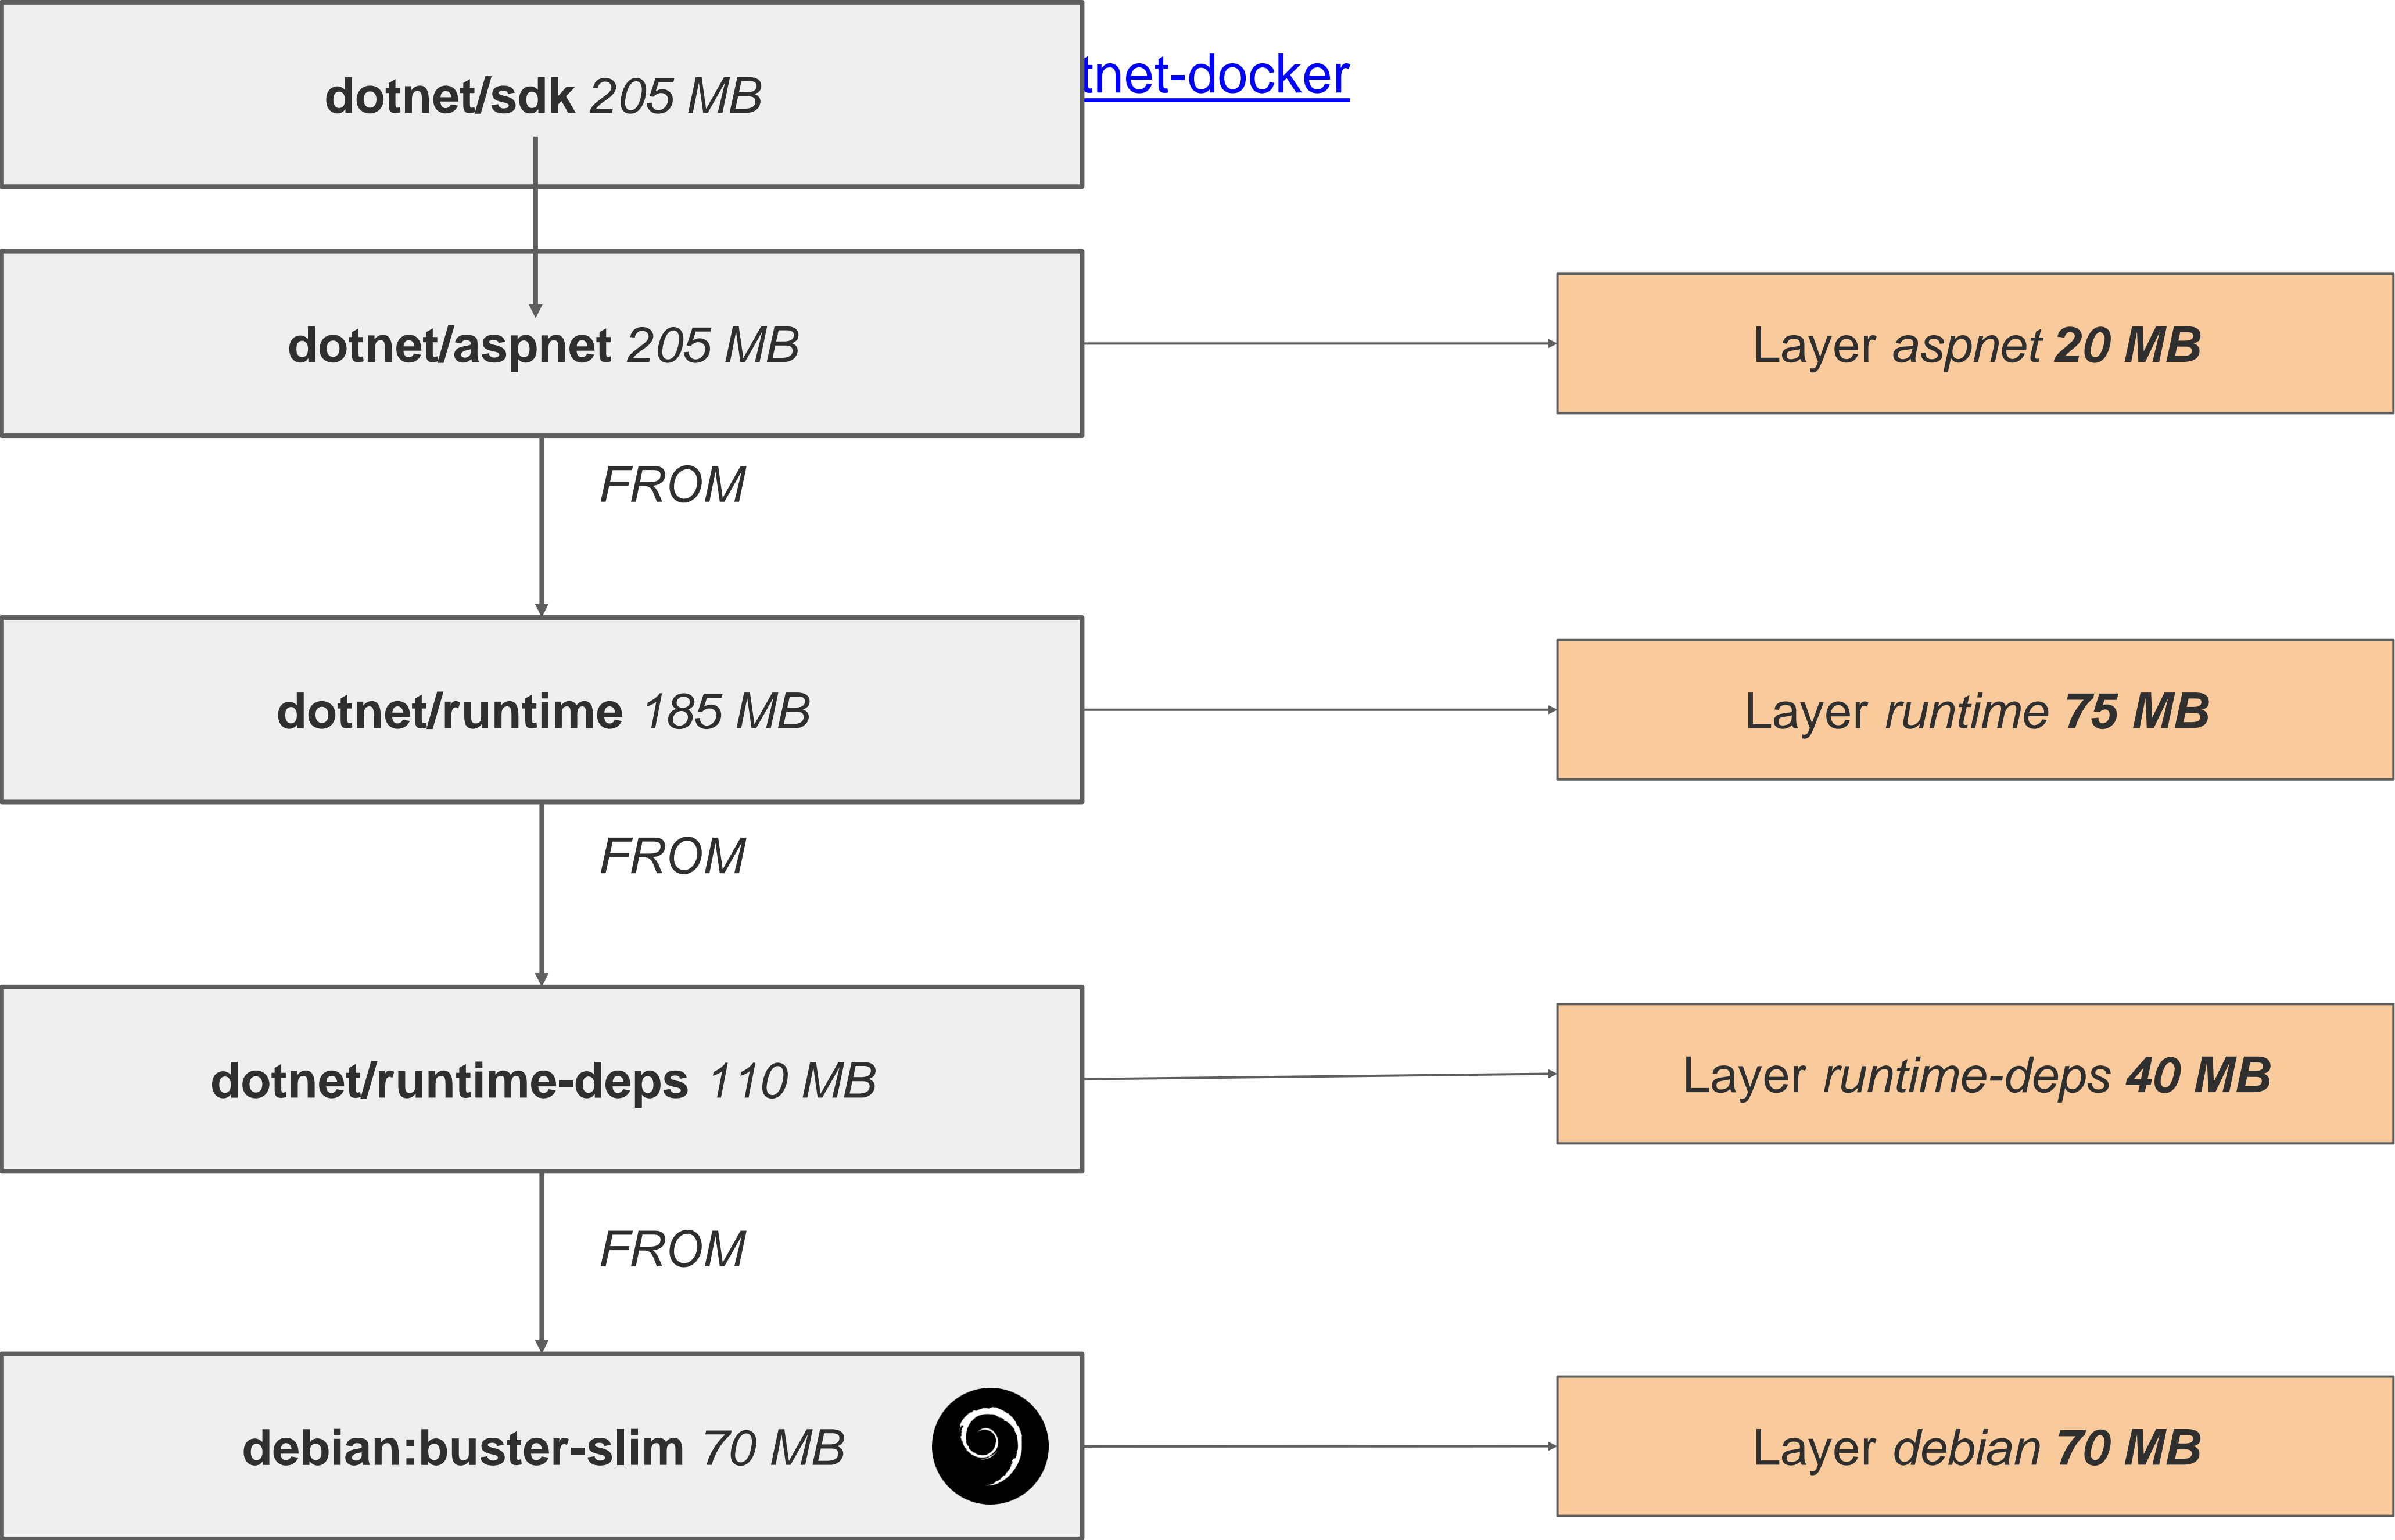

Dockerize your app <https://github.com/dotnet/dotnet-docker>

[dotnet-docker](#)

Dockerize your app <https://github.com/dotnet/dotnet-docker>

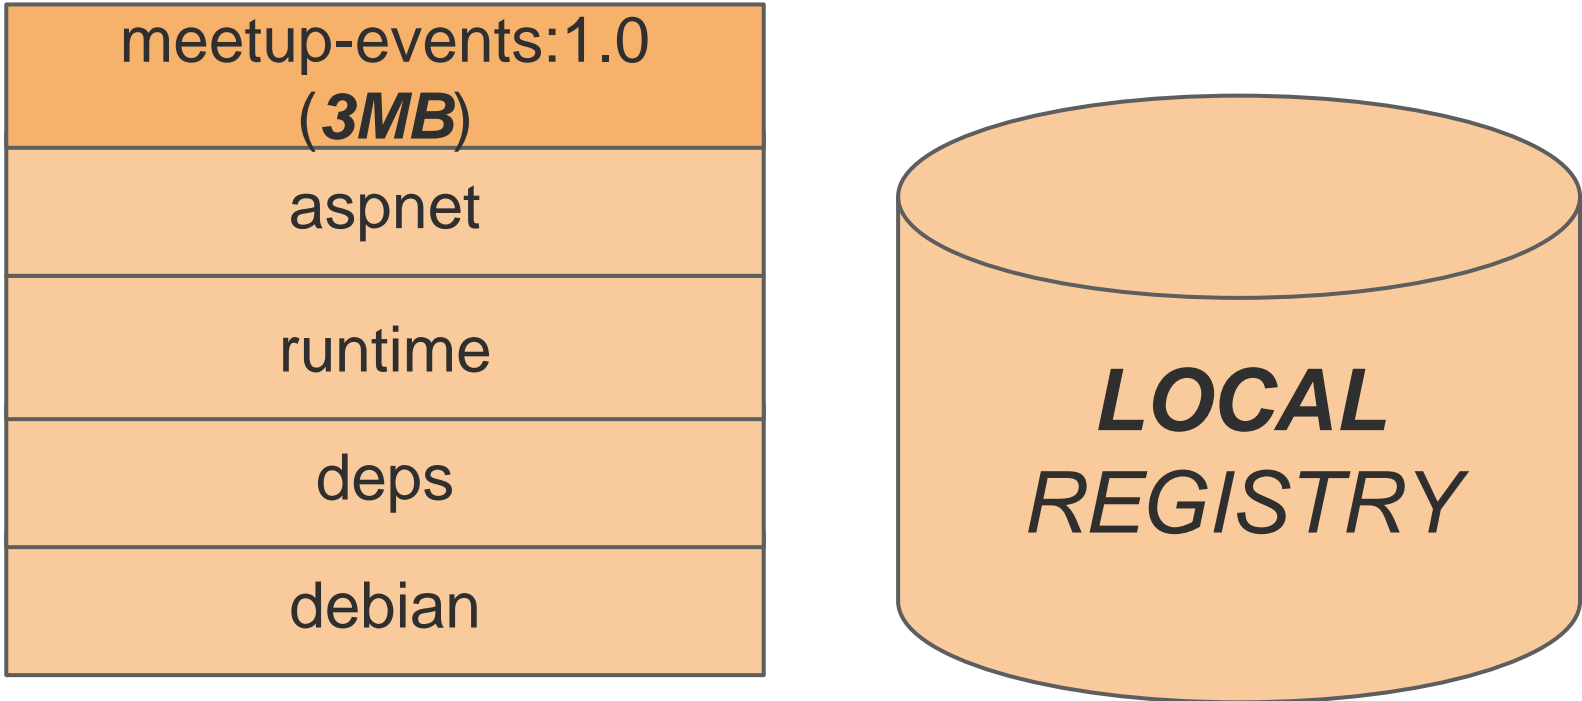

Reusing layers

Docker images lifecycle

```
$ docker build -t paulopez/meetup-events:1.0 ./
```

Machine A - Docker Local

Docker images lifecycle

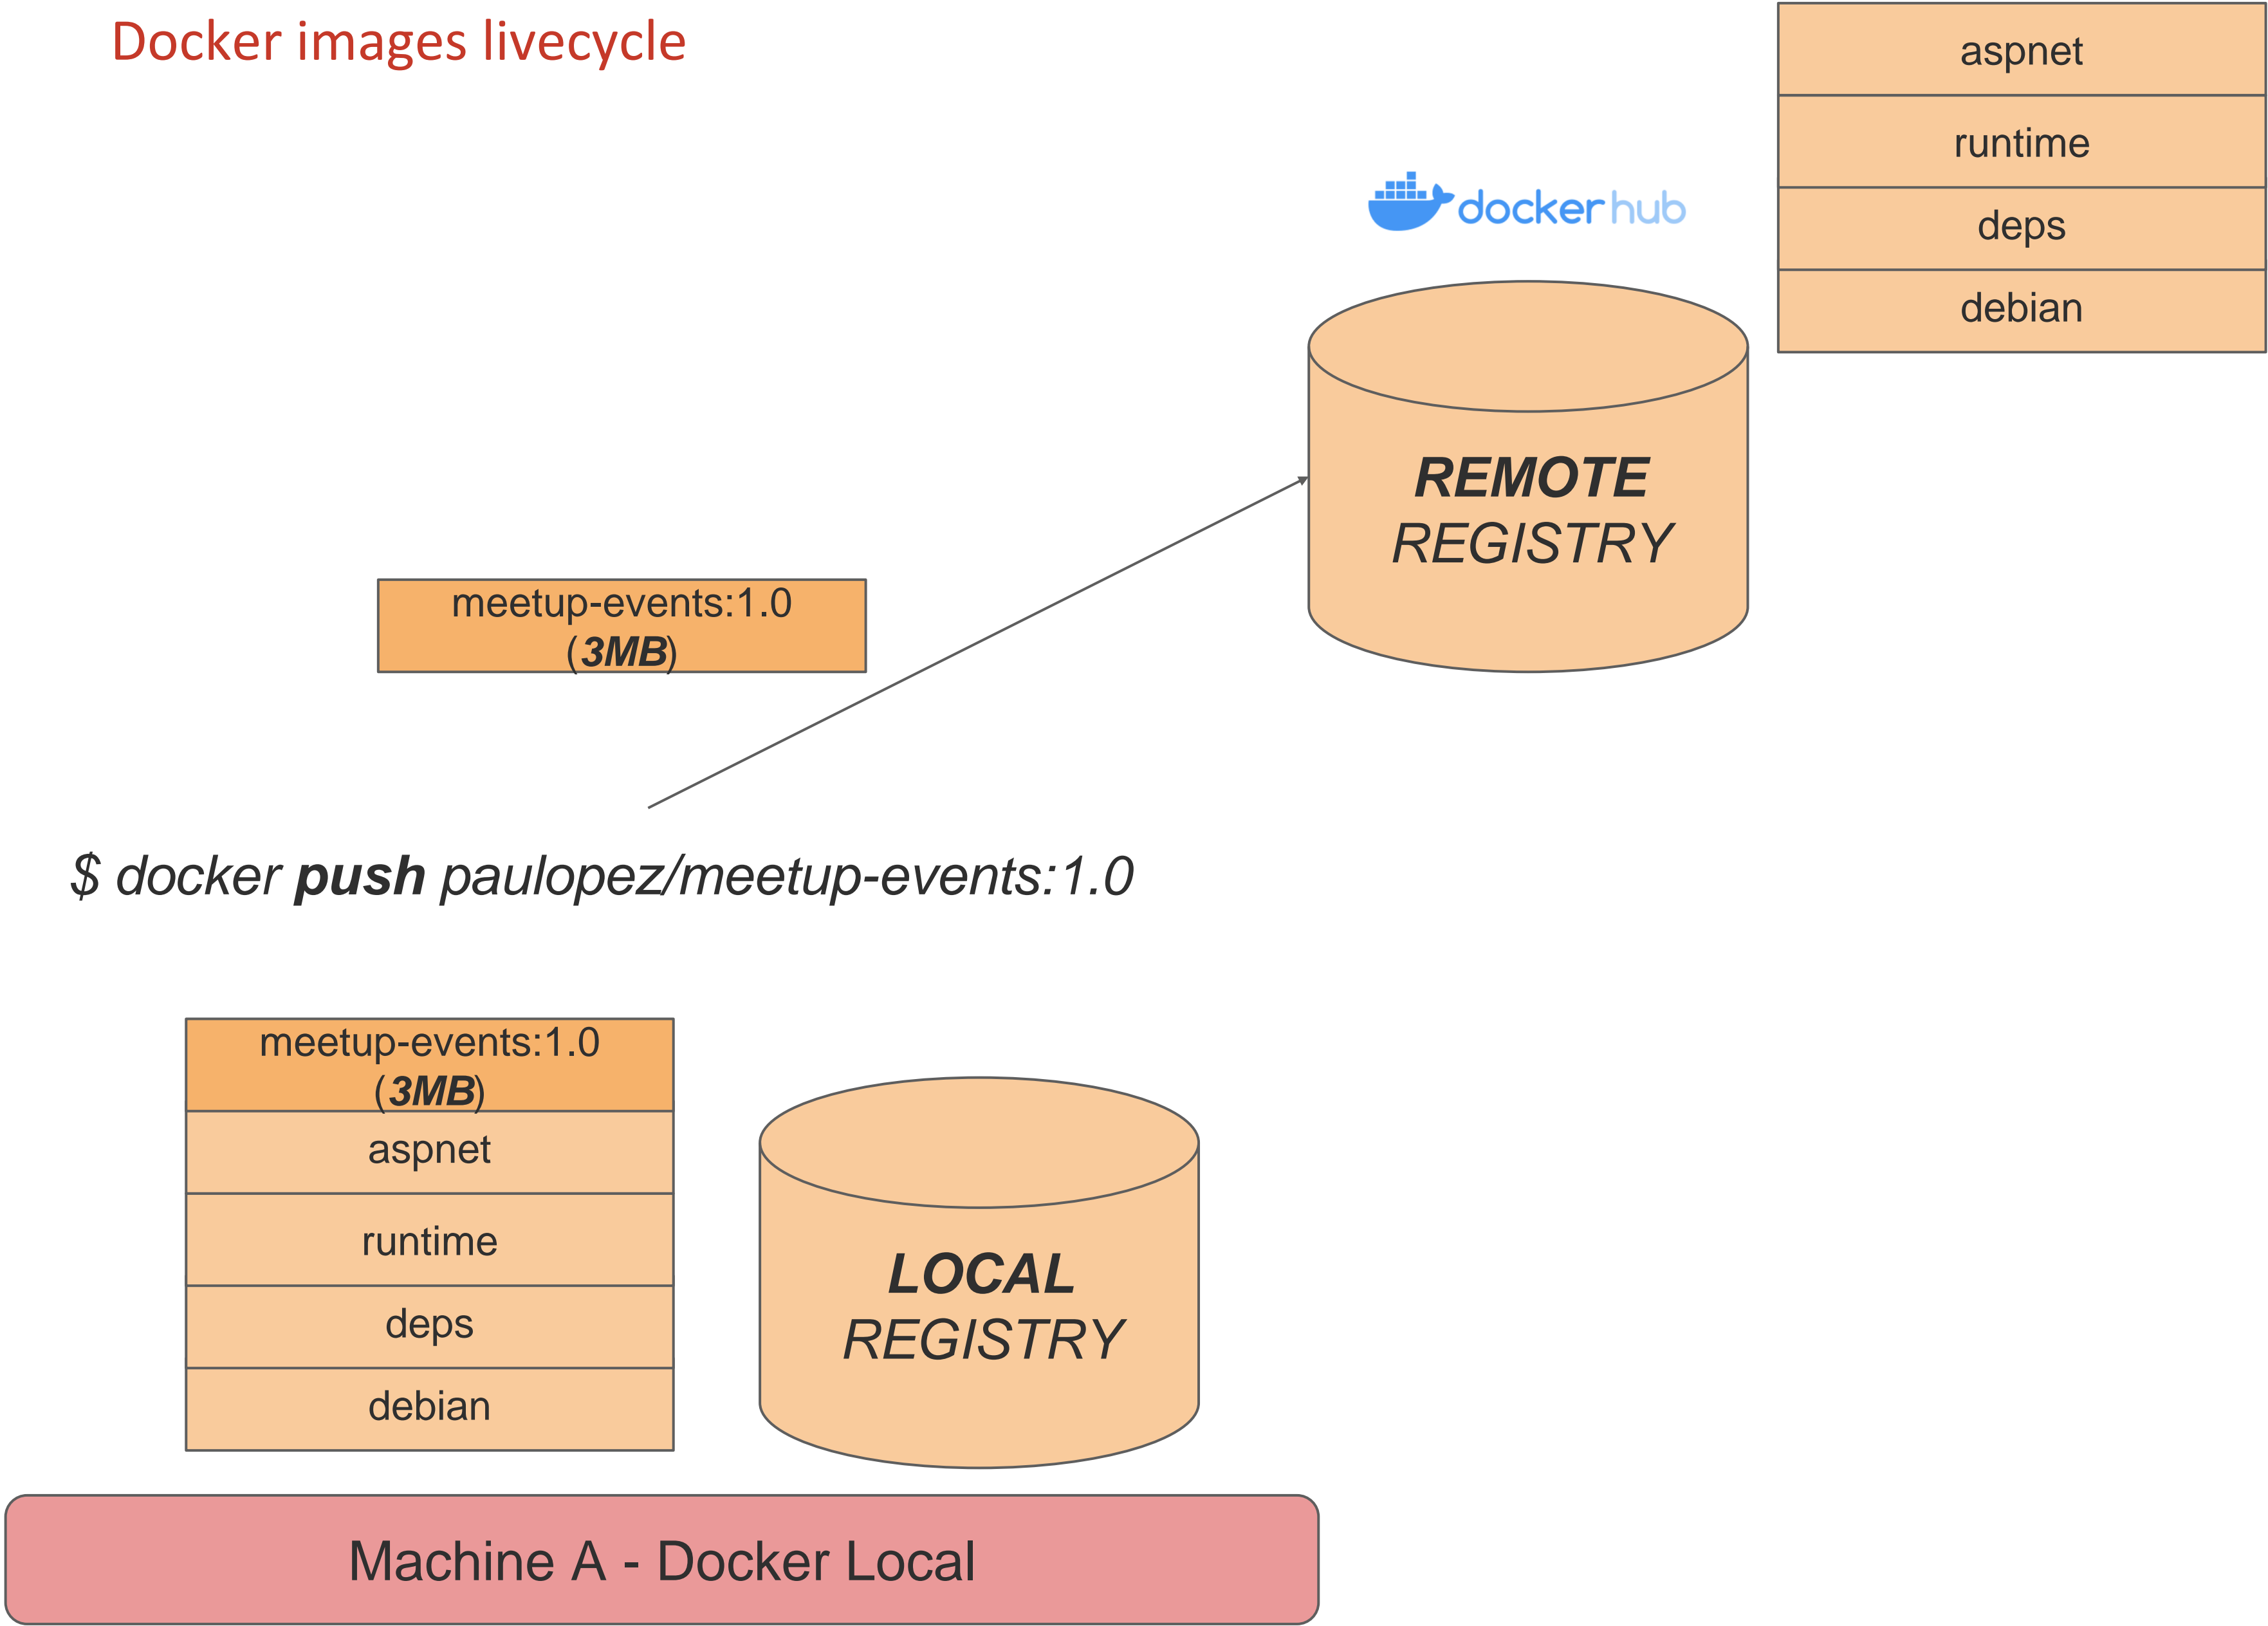

```
$ docker push paulopez/meetup-events:1.0
```

meetup-events:1.0 (3MB)
aspnet
runtime
deps
debian

Machine A - Docker Local

Docker images lifecycle

Docker images lifecycle

meetup-events:1.0 (3MB)
aspnet
runtime
deps
debian

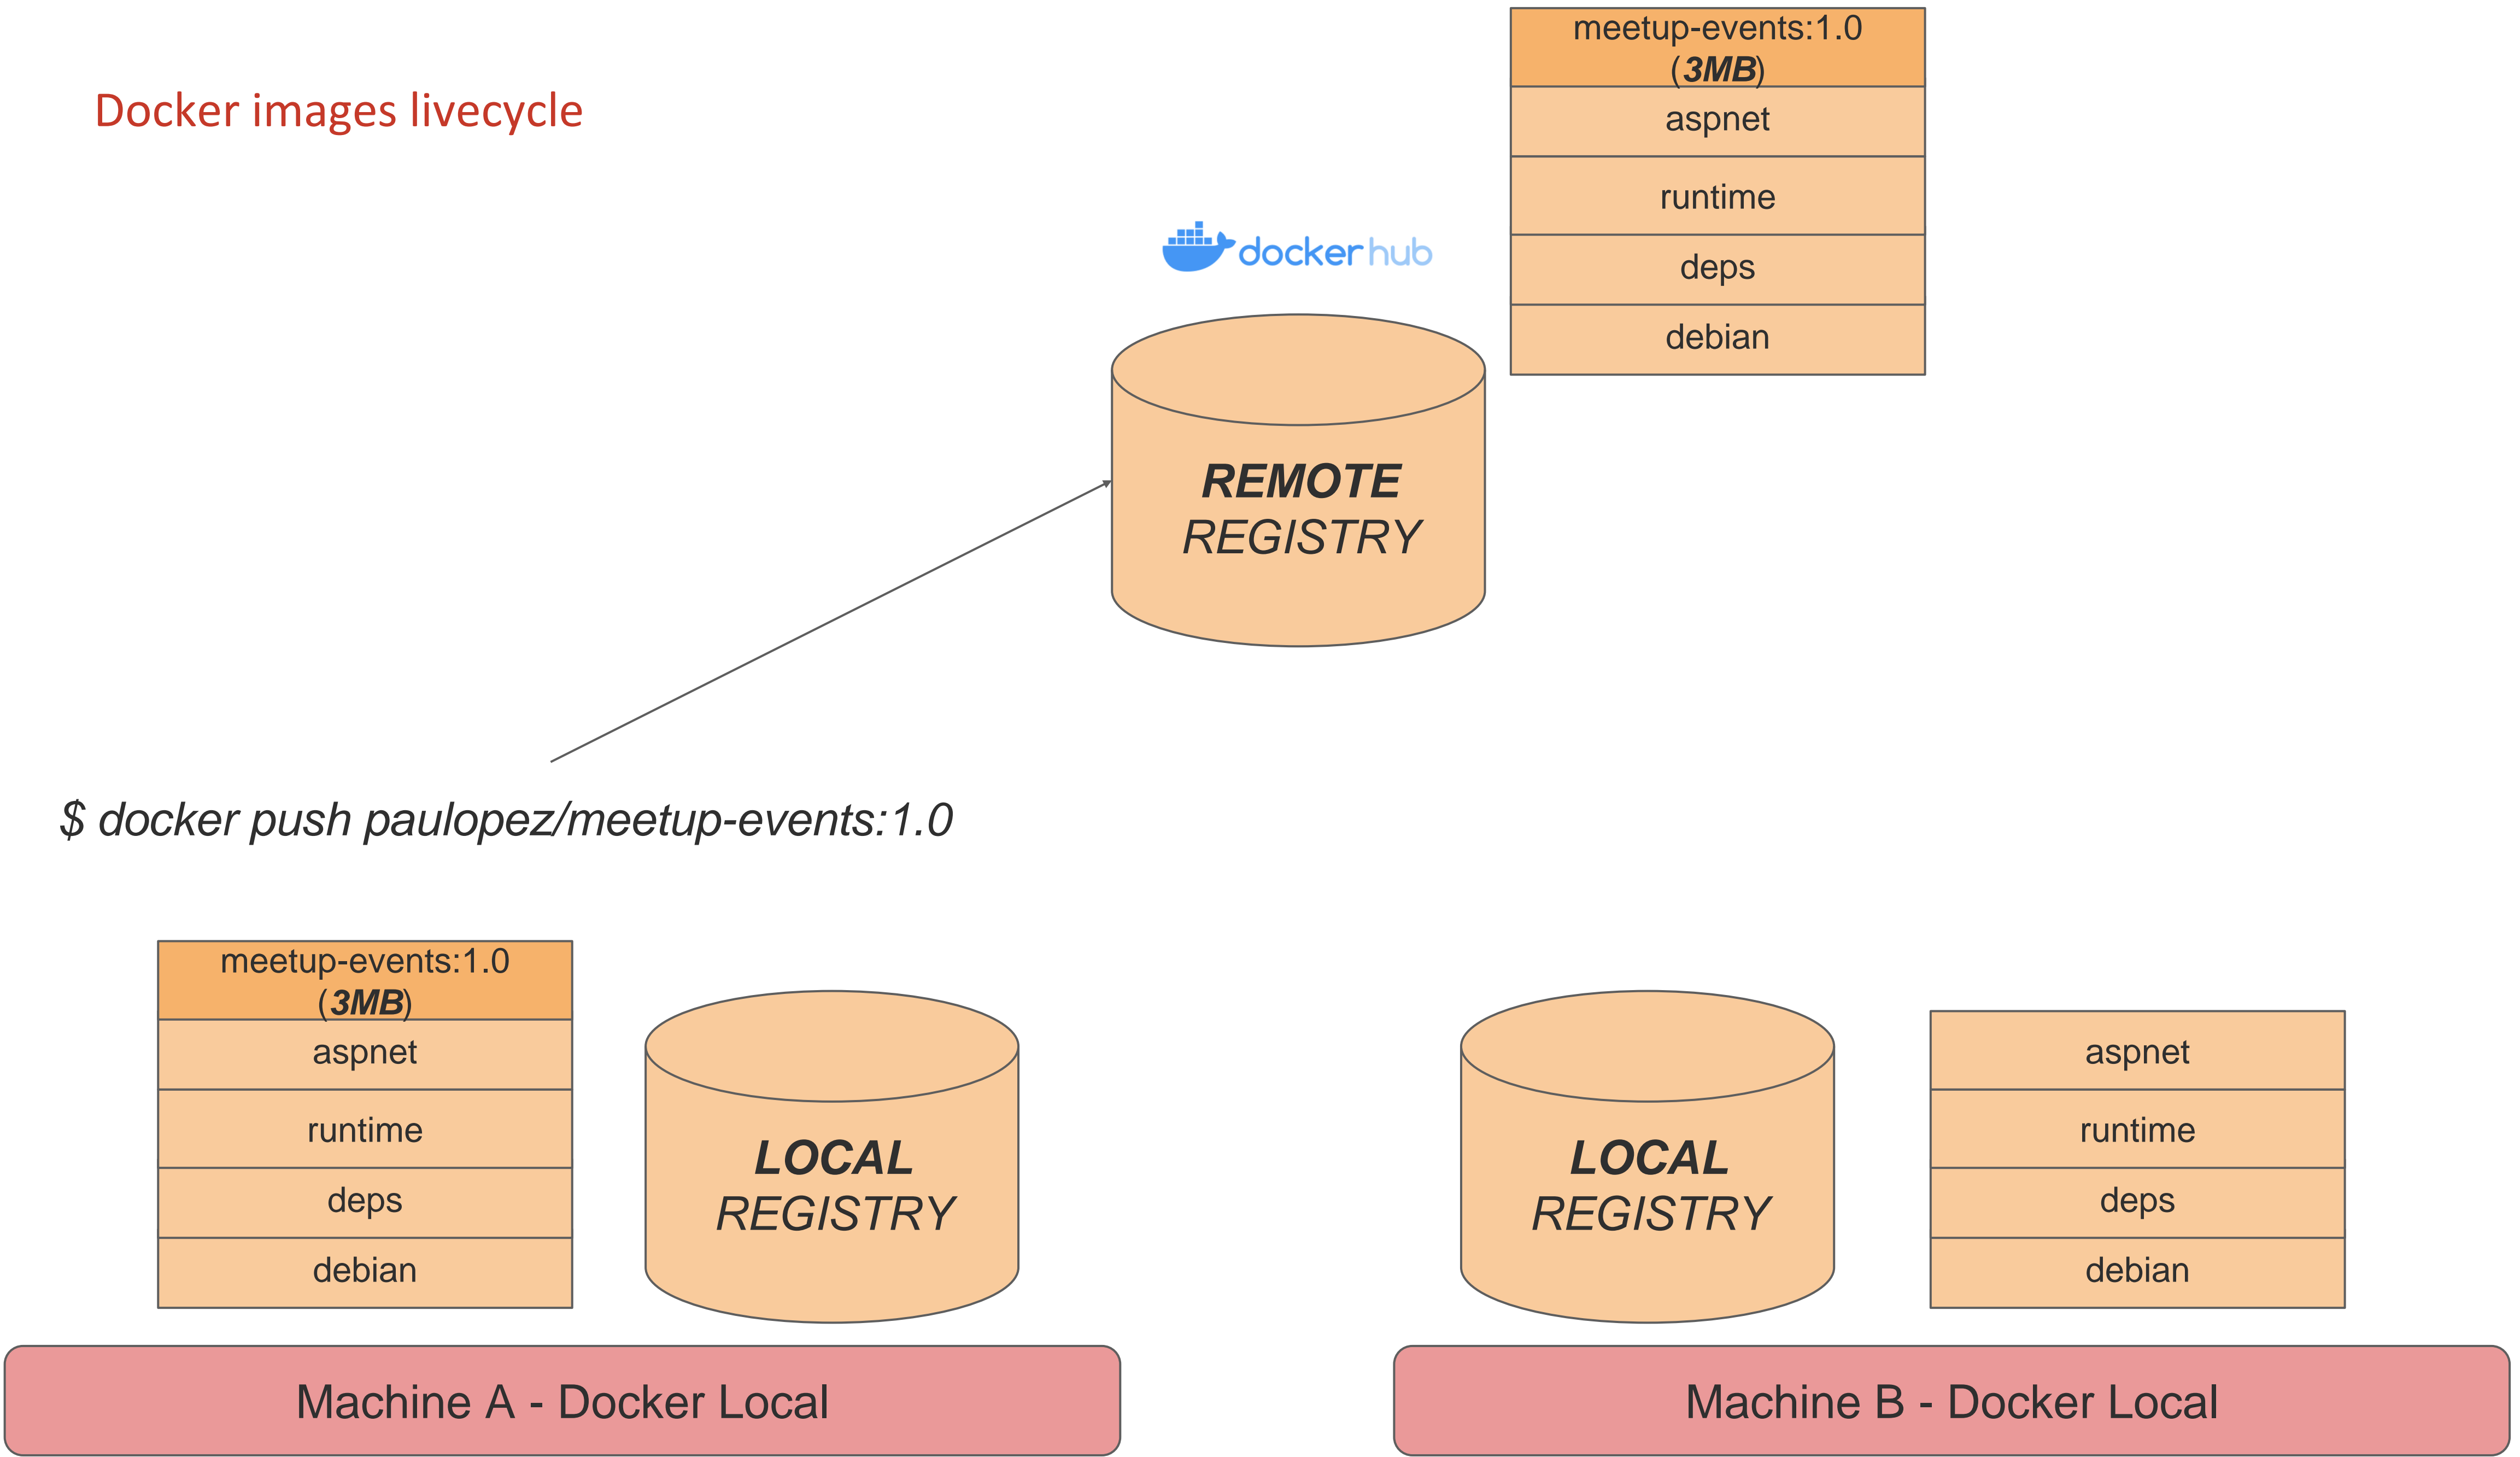

```
$ docker push paulopez/meetup-events:1.0
```

meetup-events:1.0 (3MB)
aspnet

deps
debian

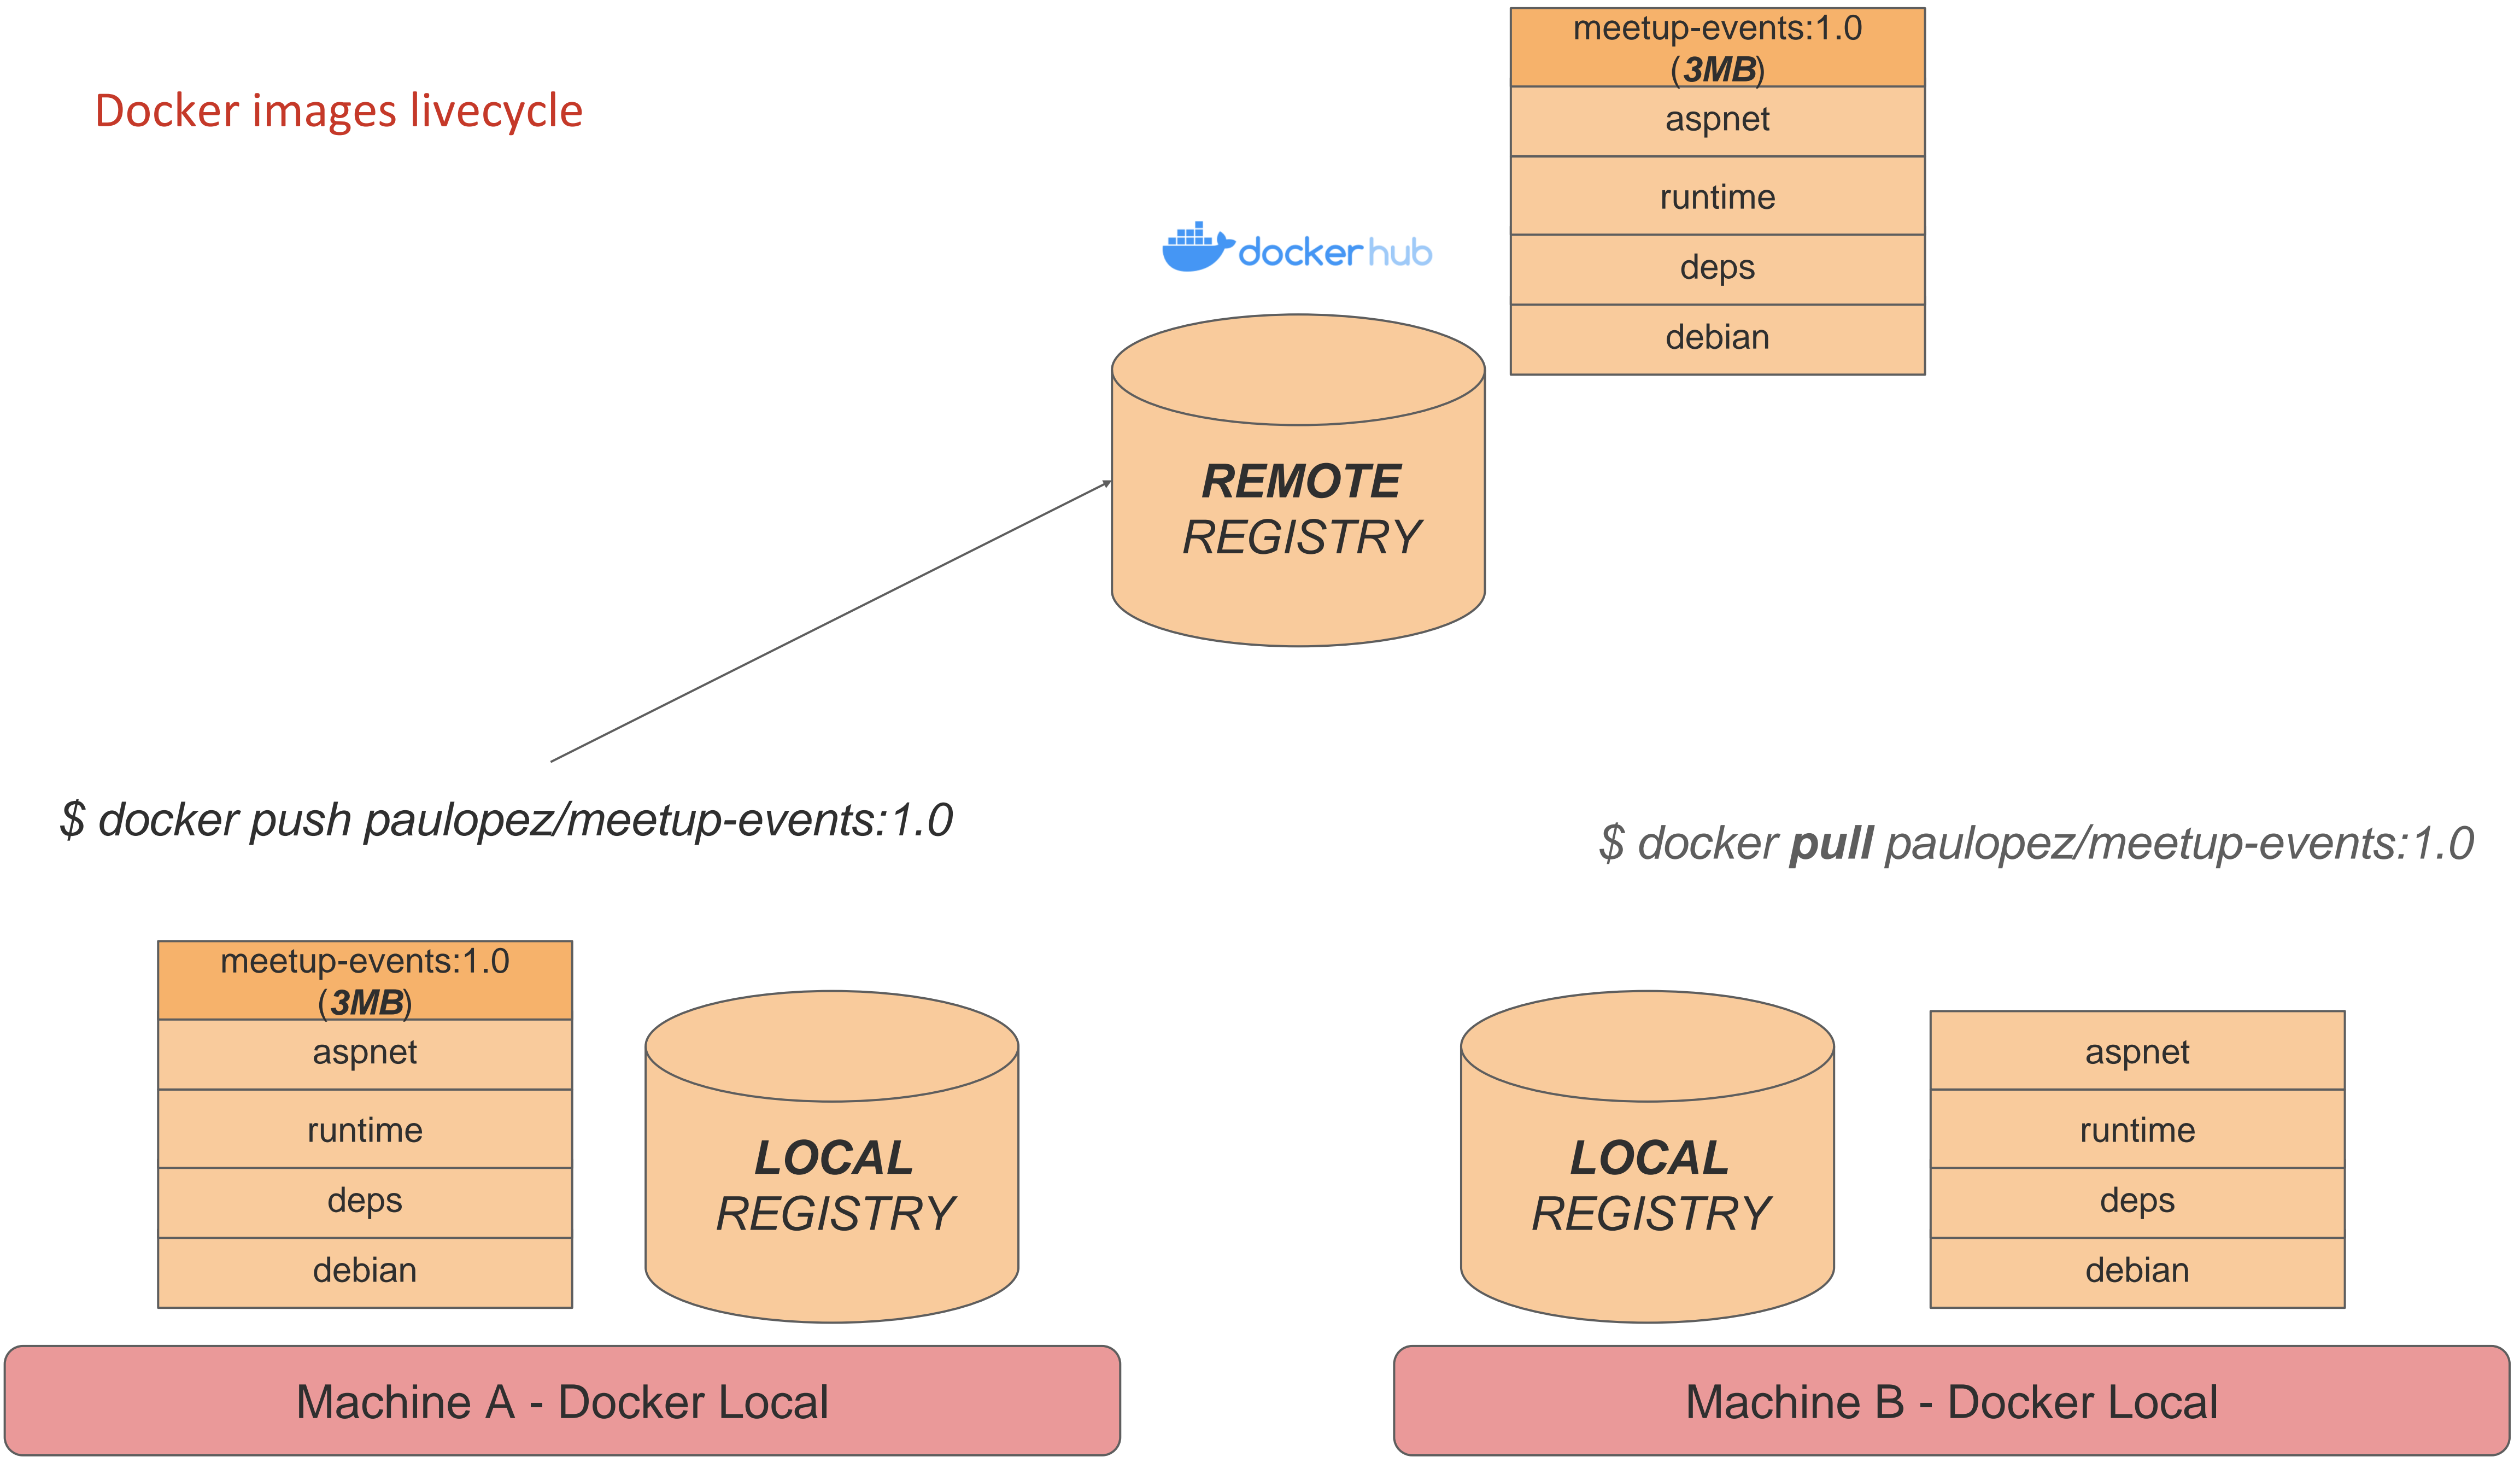

Machine A - Docker Local

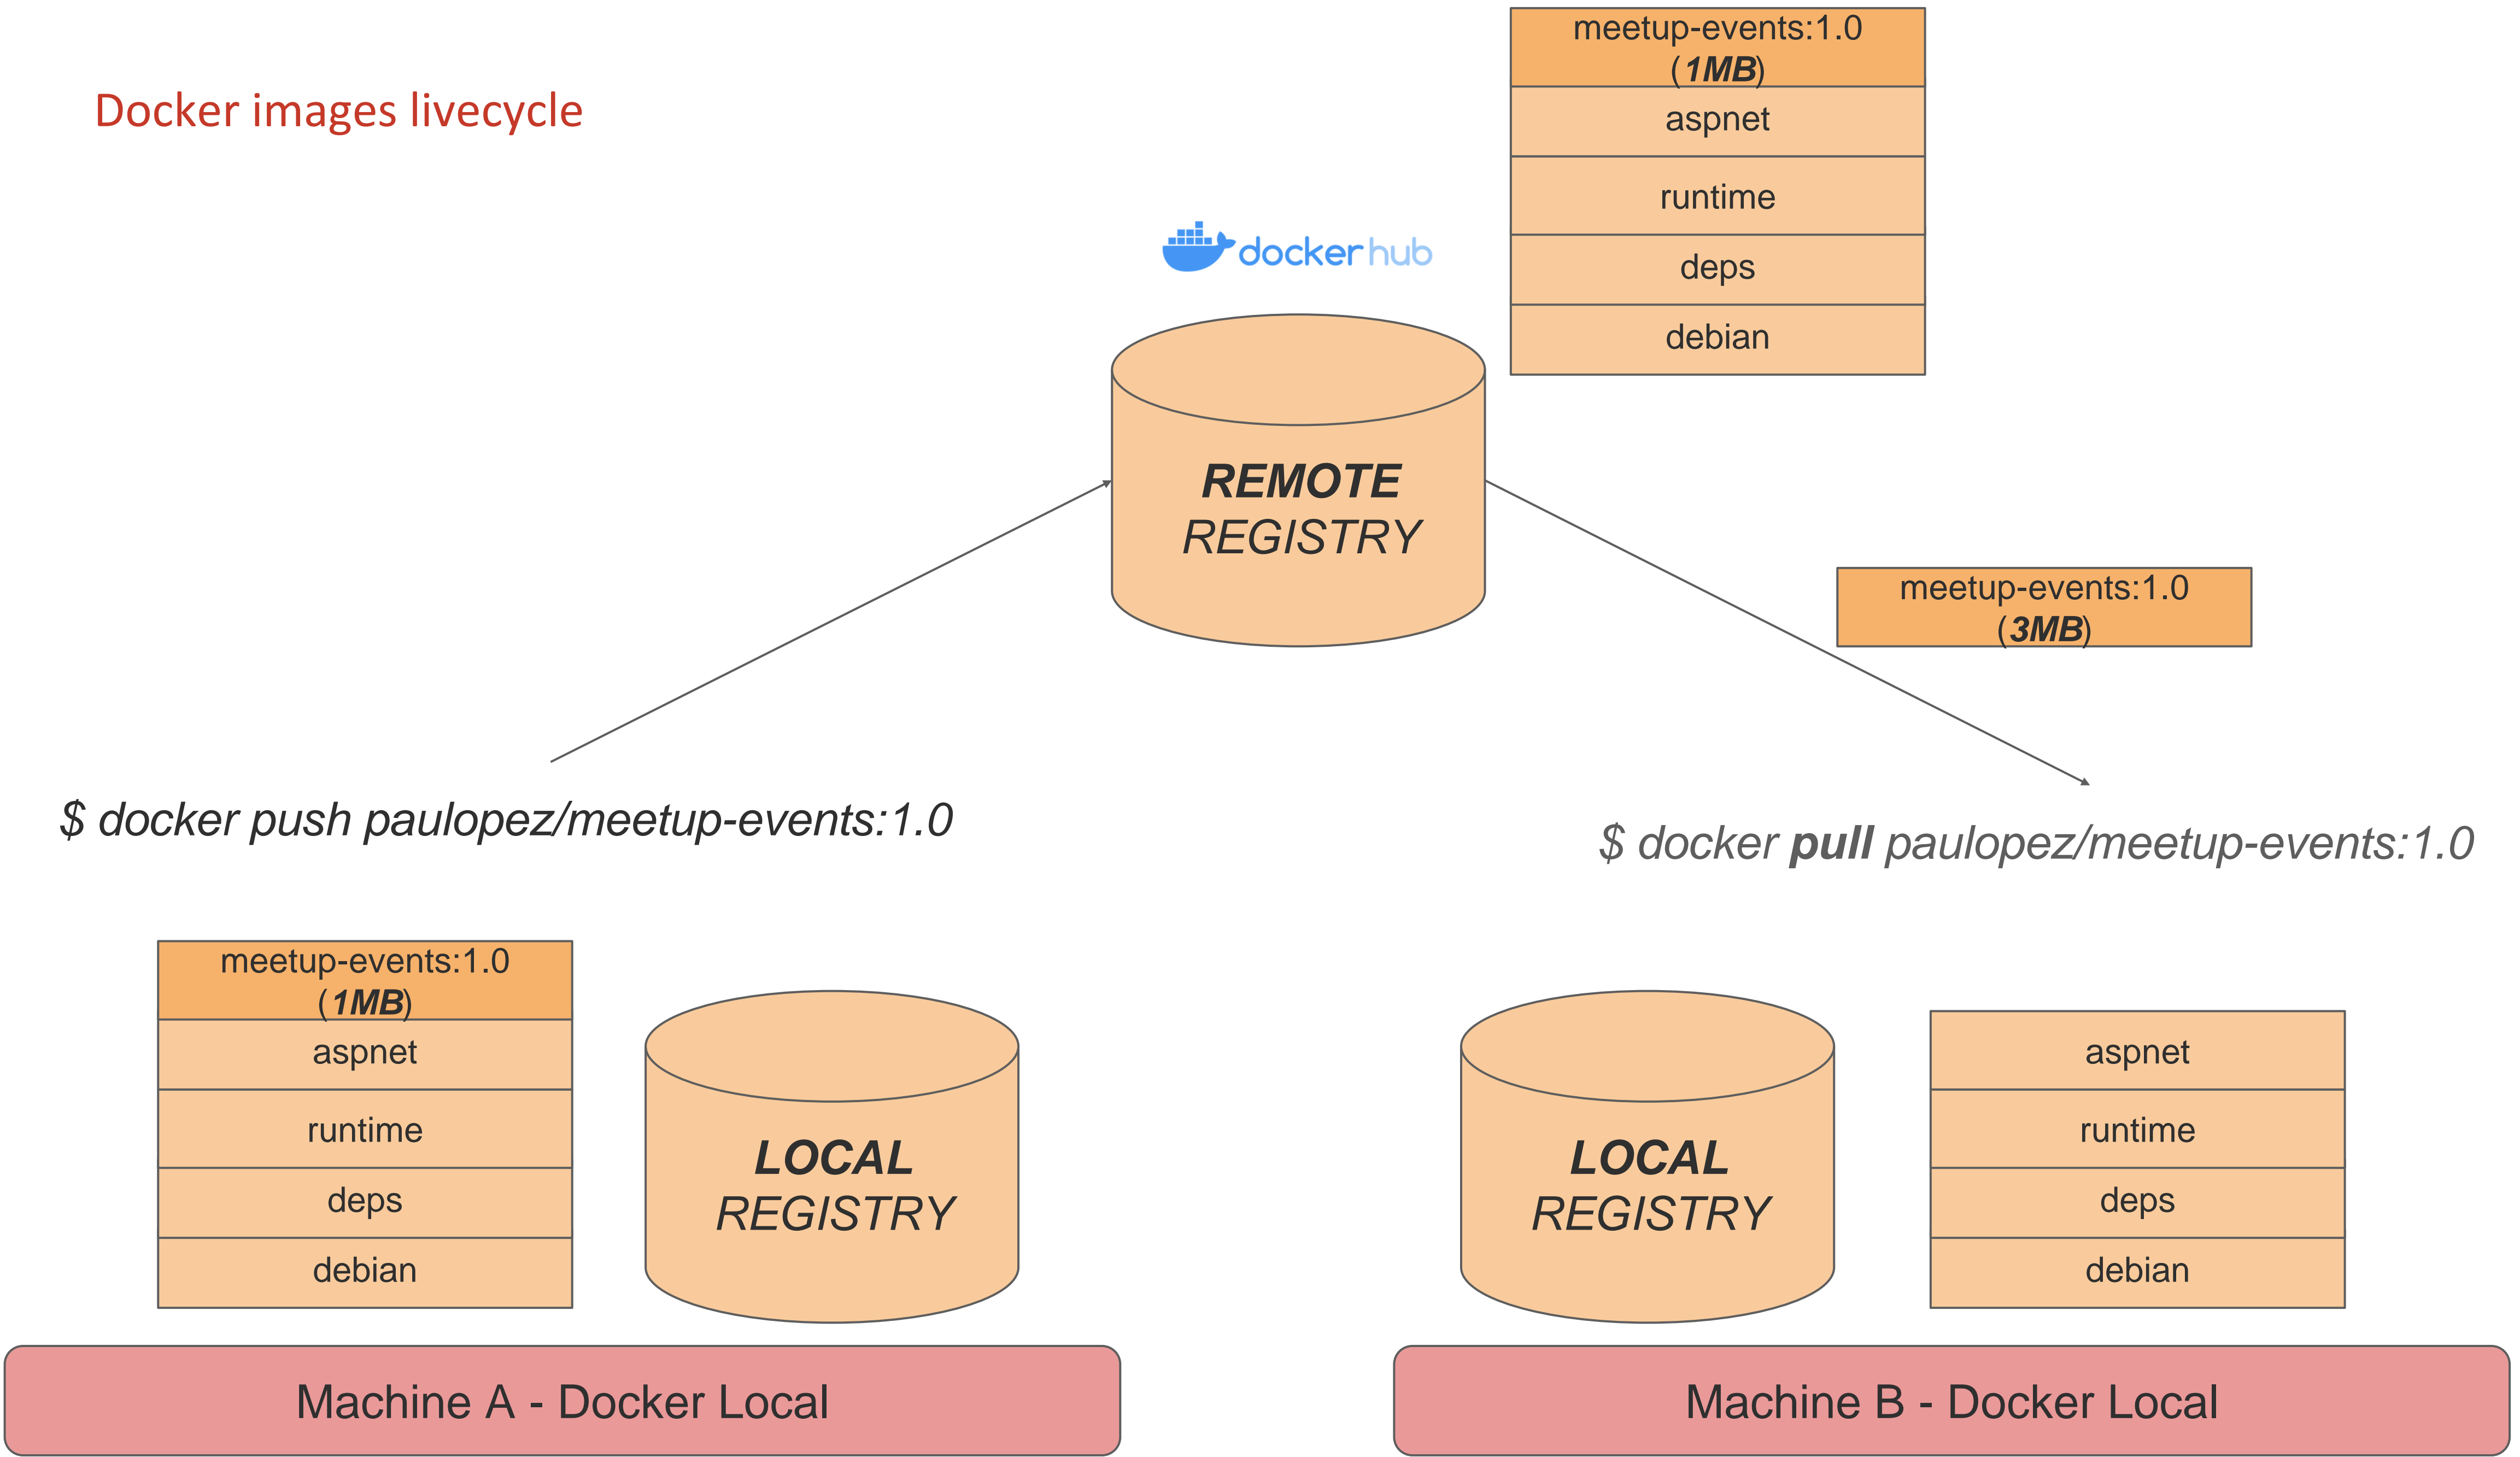

Docker images lifecycle

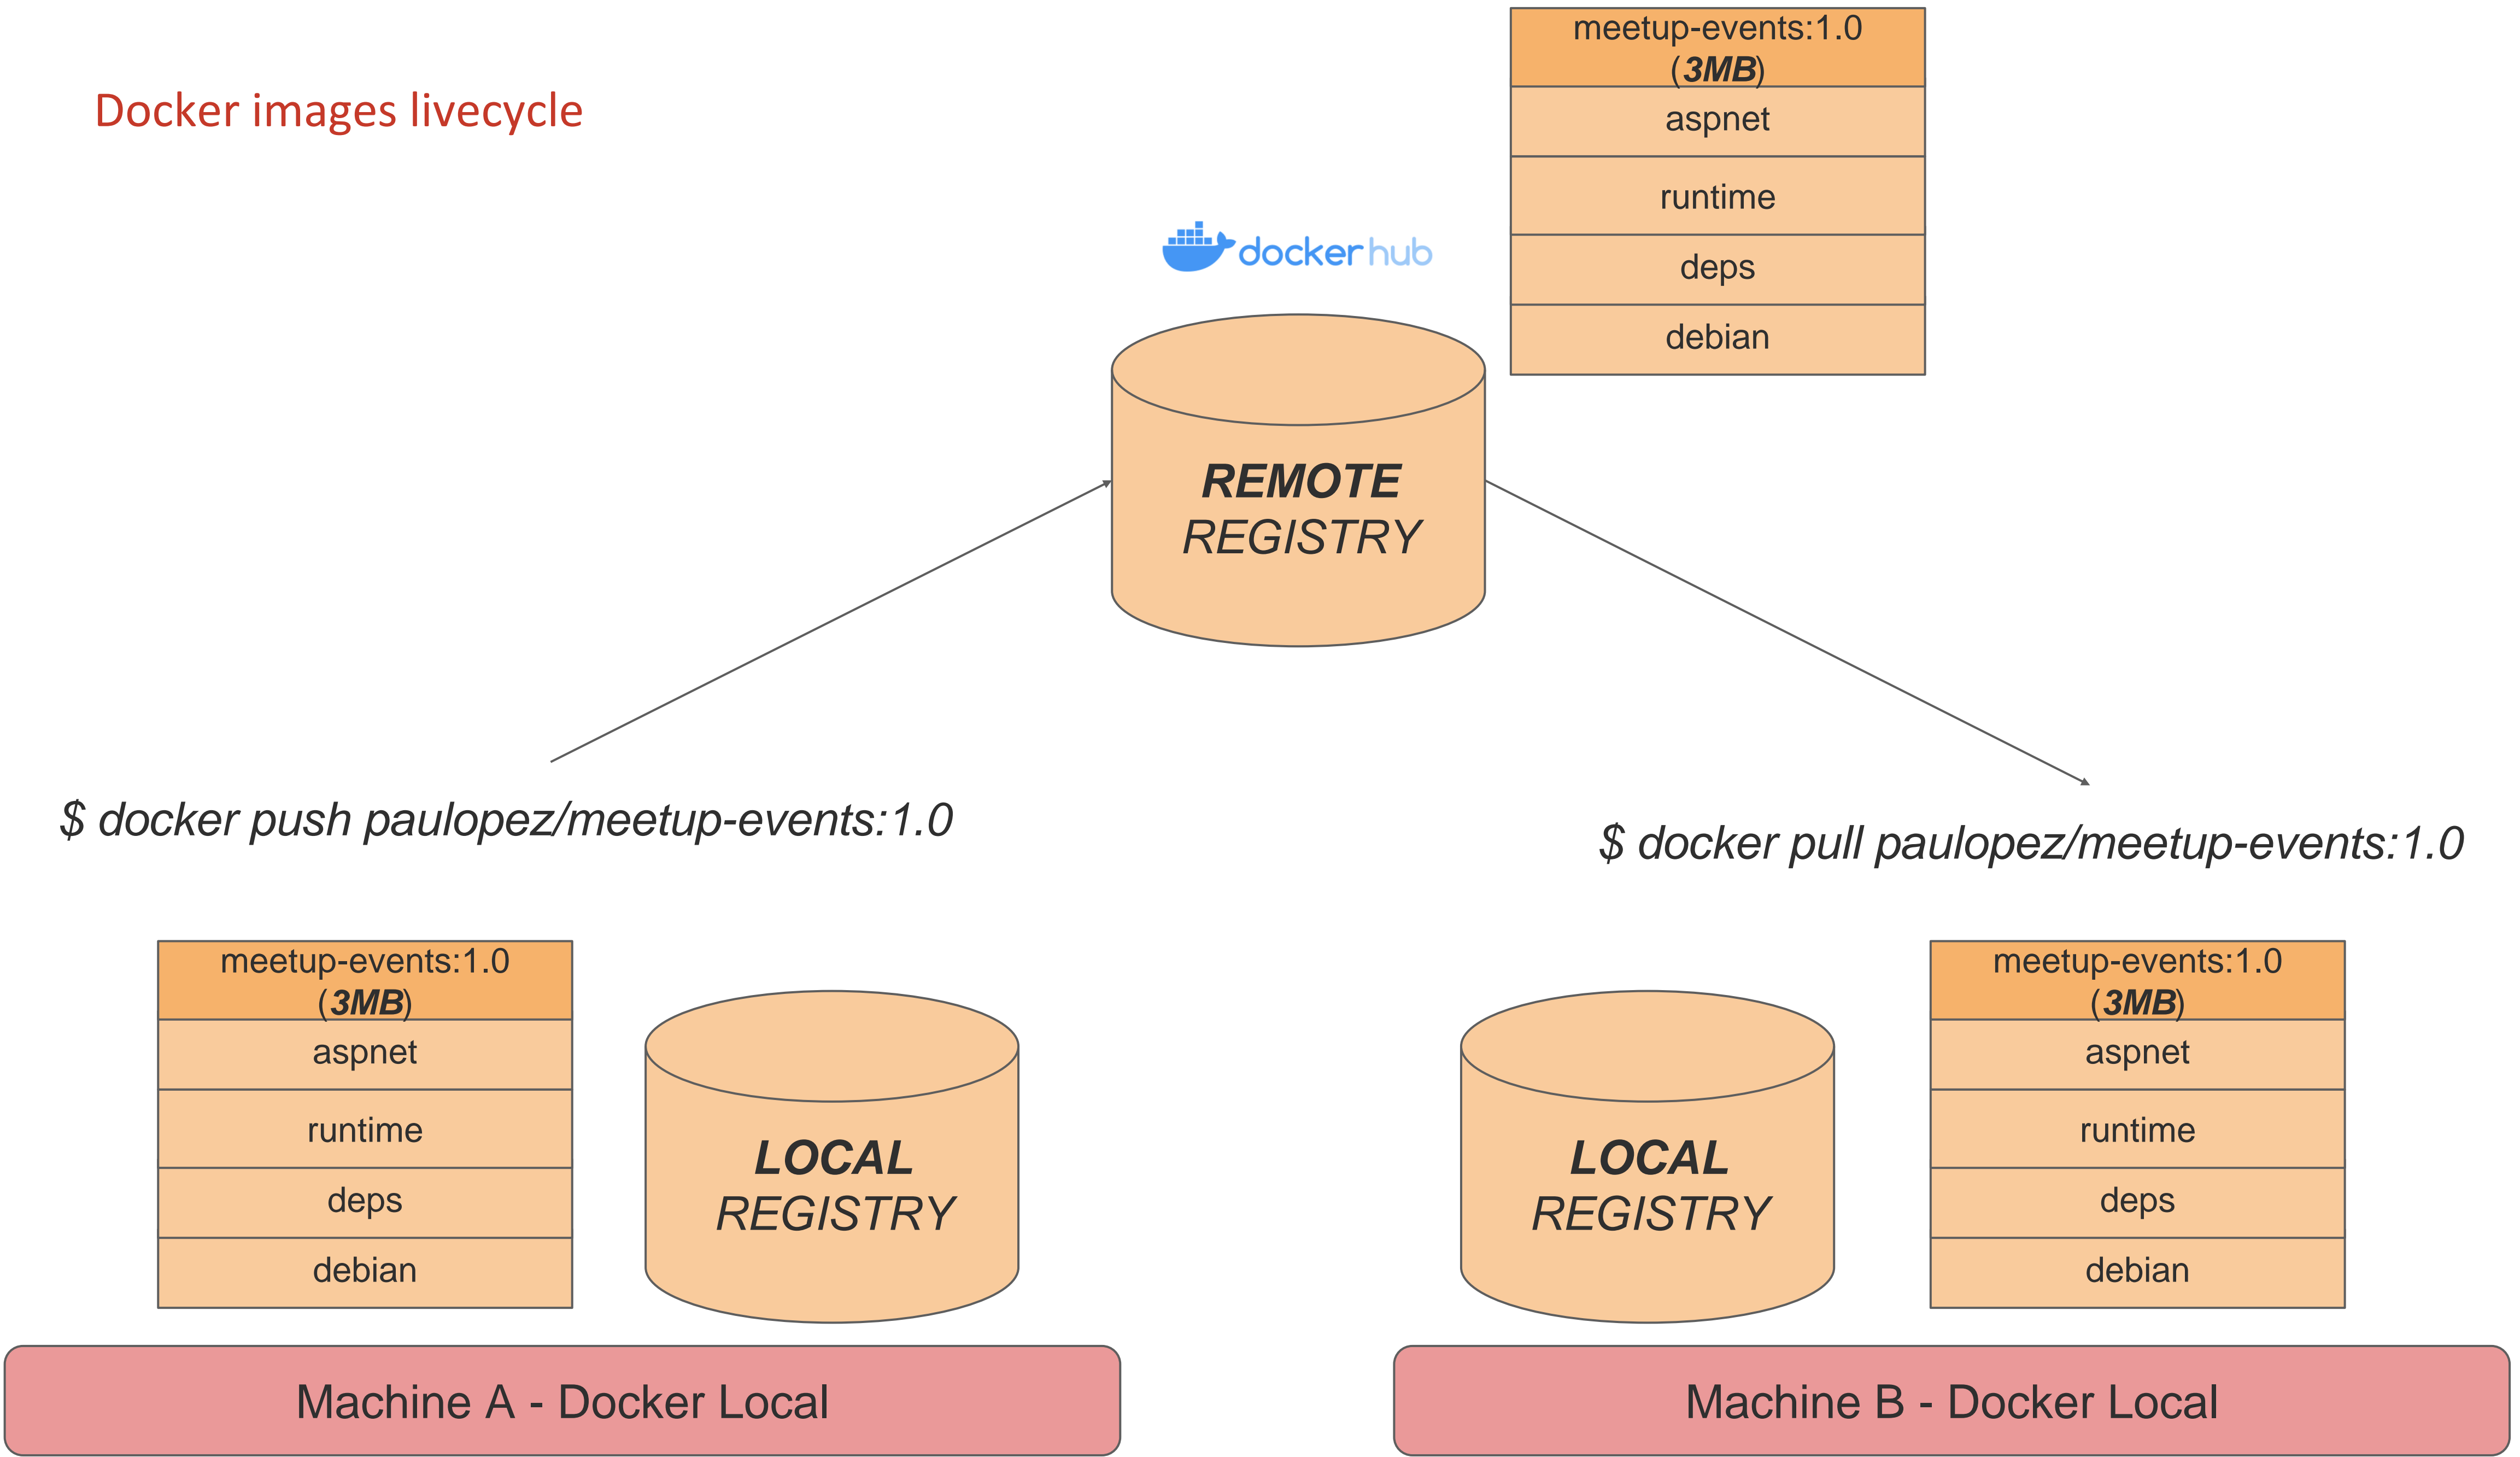

Docker images lifecycle

Docker images lifecycle

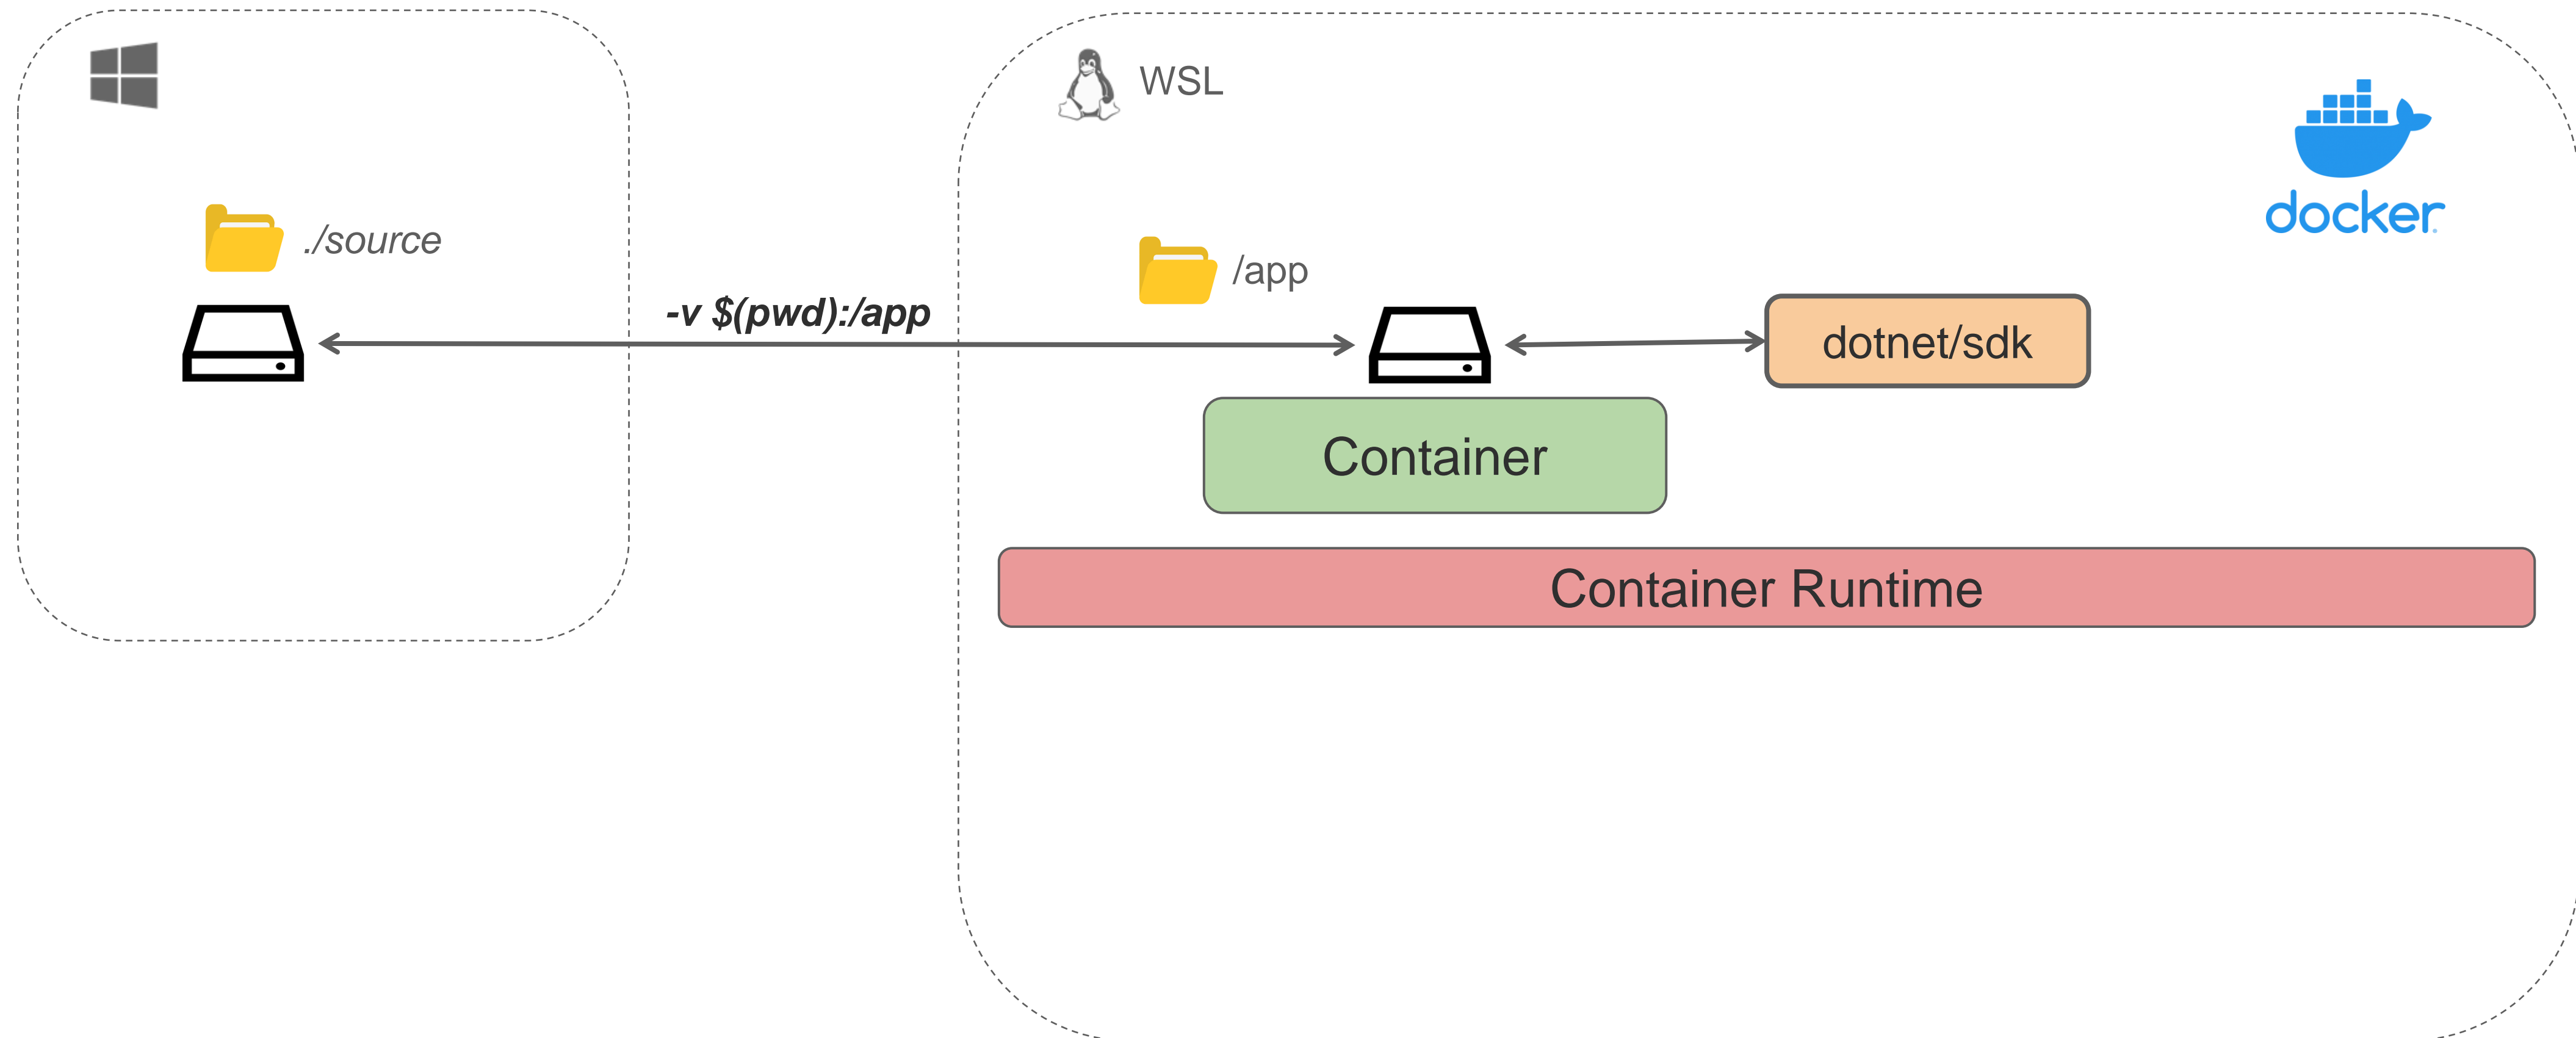

Docker images lifecycle

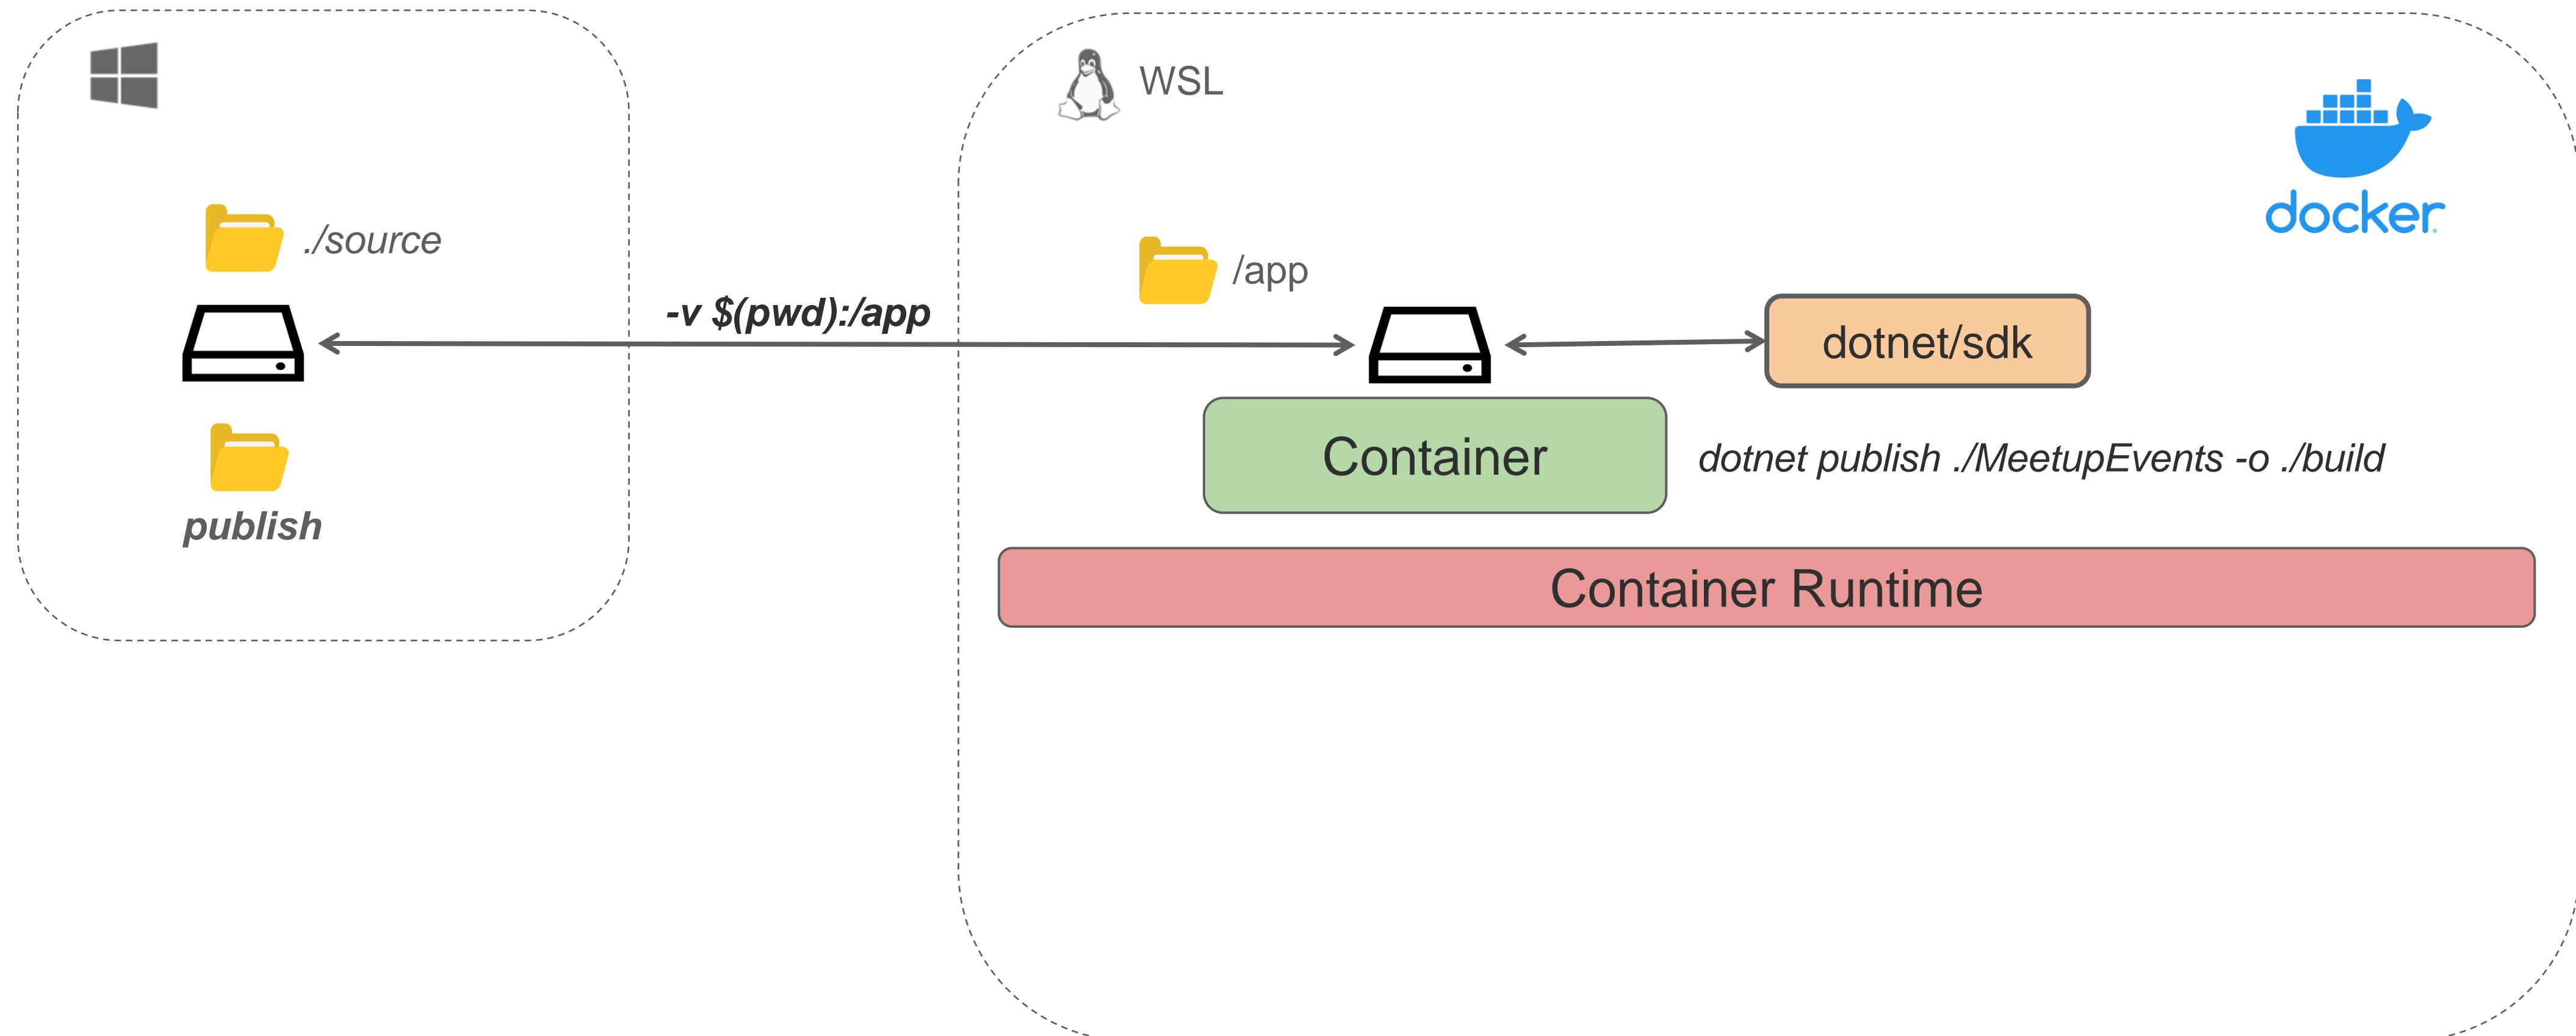

Multistage build with docker

```
$ docker run -w /app -v $(pwd):/app mcr.microsoft.com/dotnet/sdk dotnet publish ./MeetupEvents -o ./build
```

Multistage build with docker

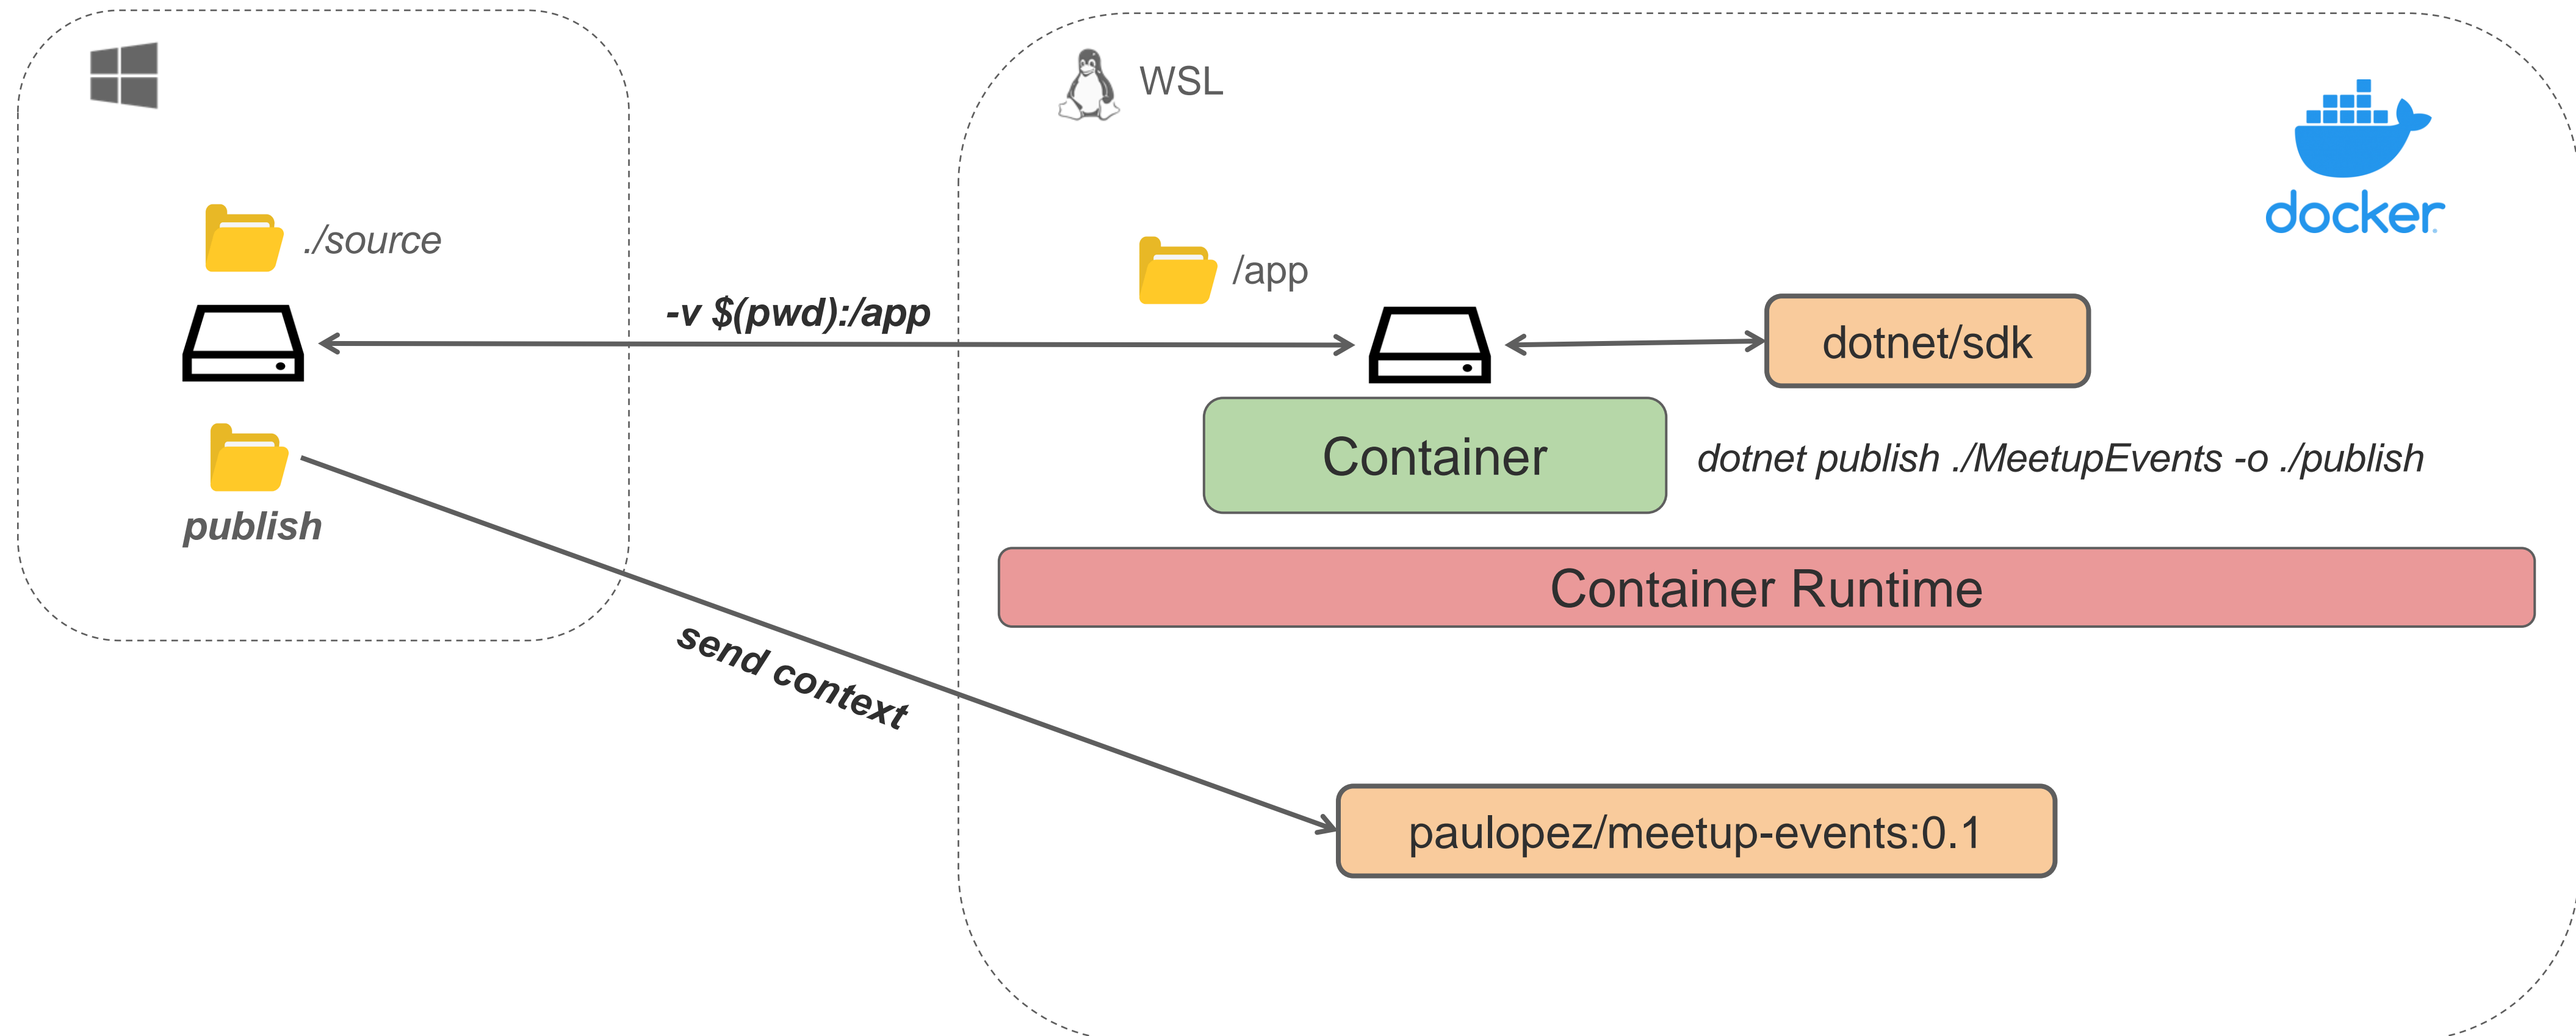

```
$ docker run -w /app -v $(pwd):/app mcr.microsoft.com/dotnet/sdk dotnet publish ./MeetupEvents -o ./build
```

Multistage build with docker

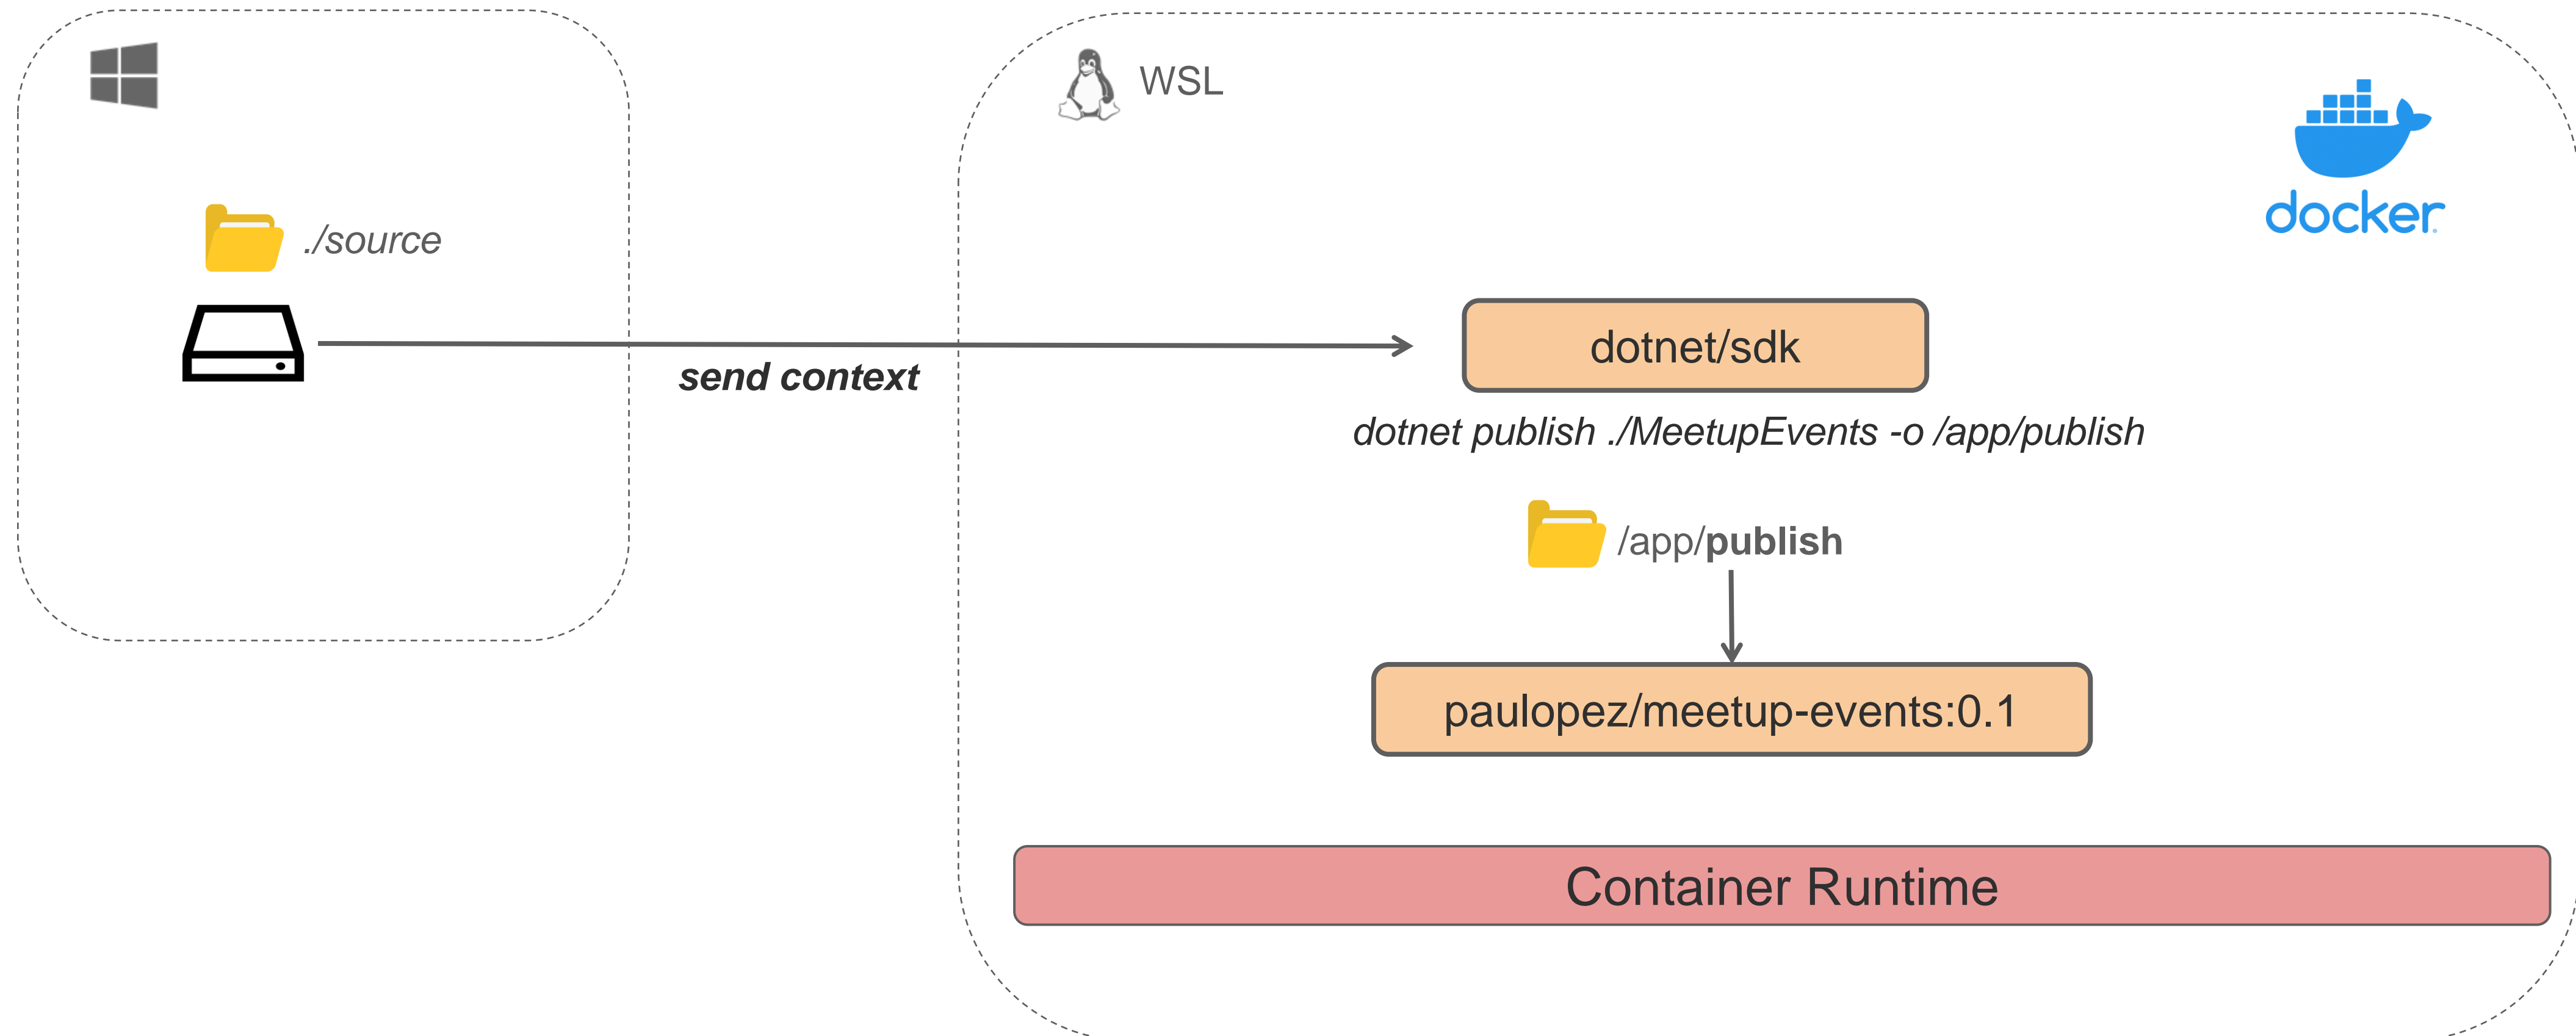

```
$ docker run -w /app -v $(pwd):/app mcr.microsoft.com/dotnet/sdk dotnet publish ./MeetupEvents -o ./publish
```

```
$ docker build -f Dockerfile -t paulopez/meetup-events:0.1 ./publish
```

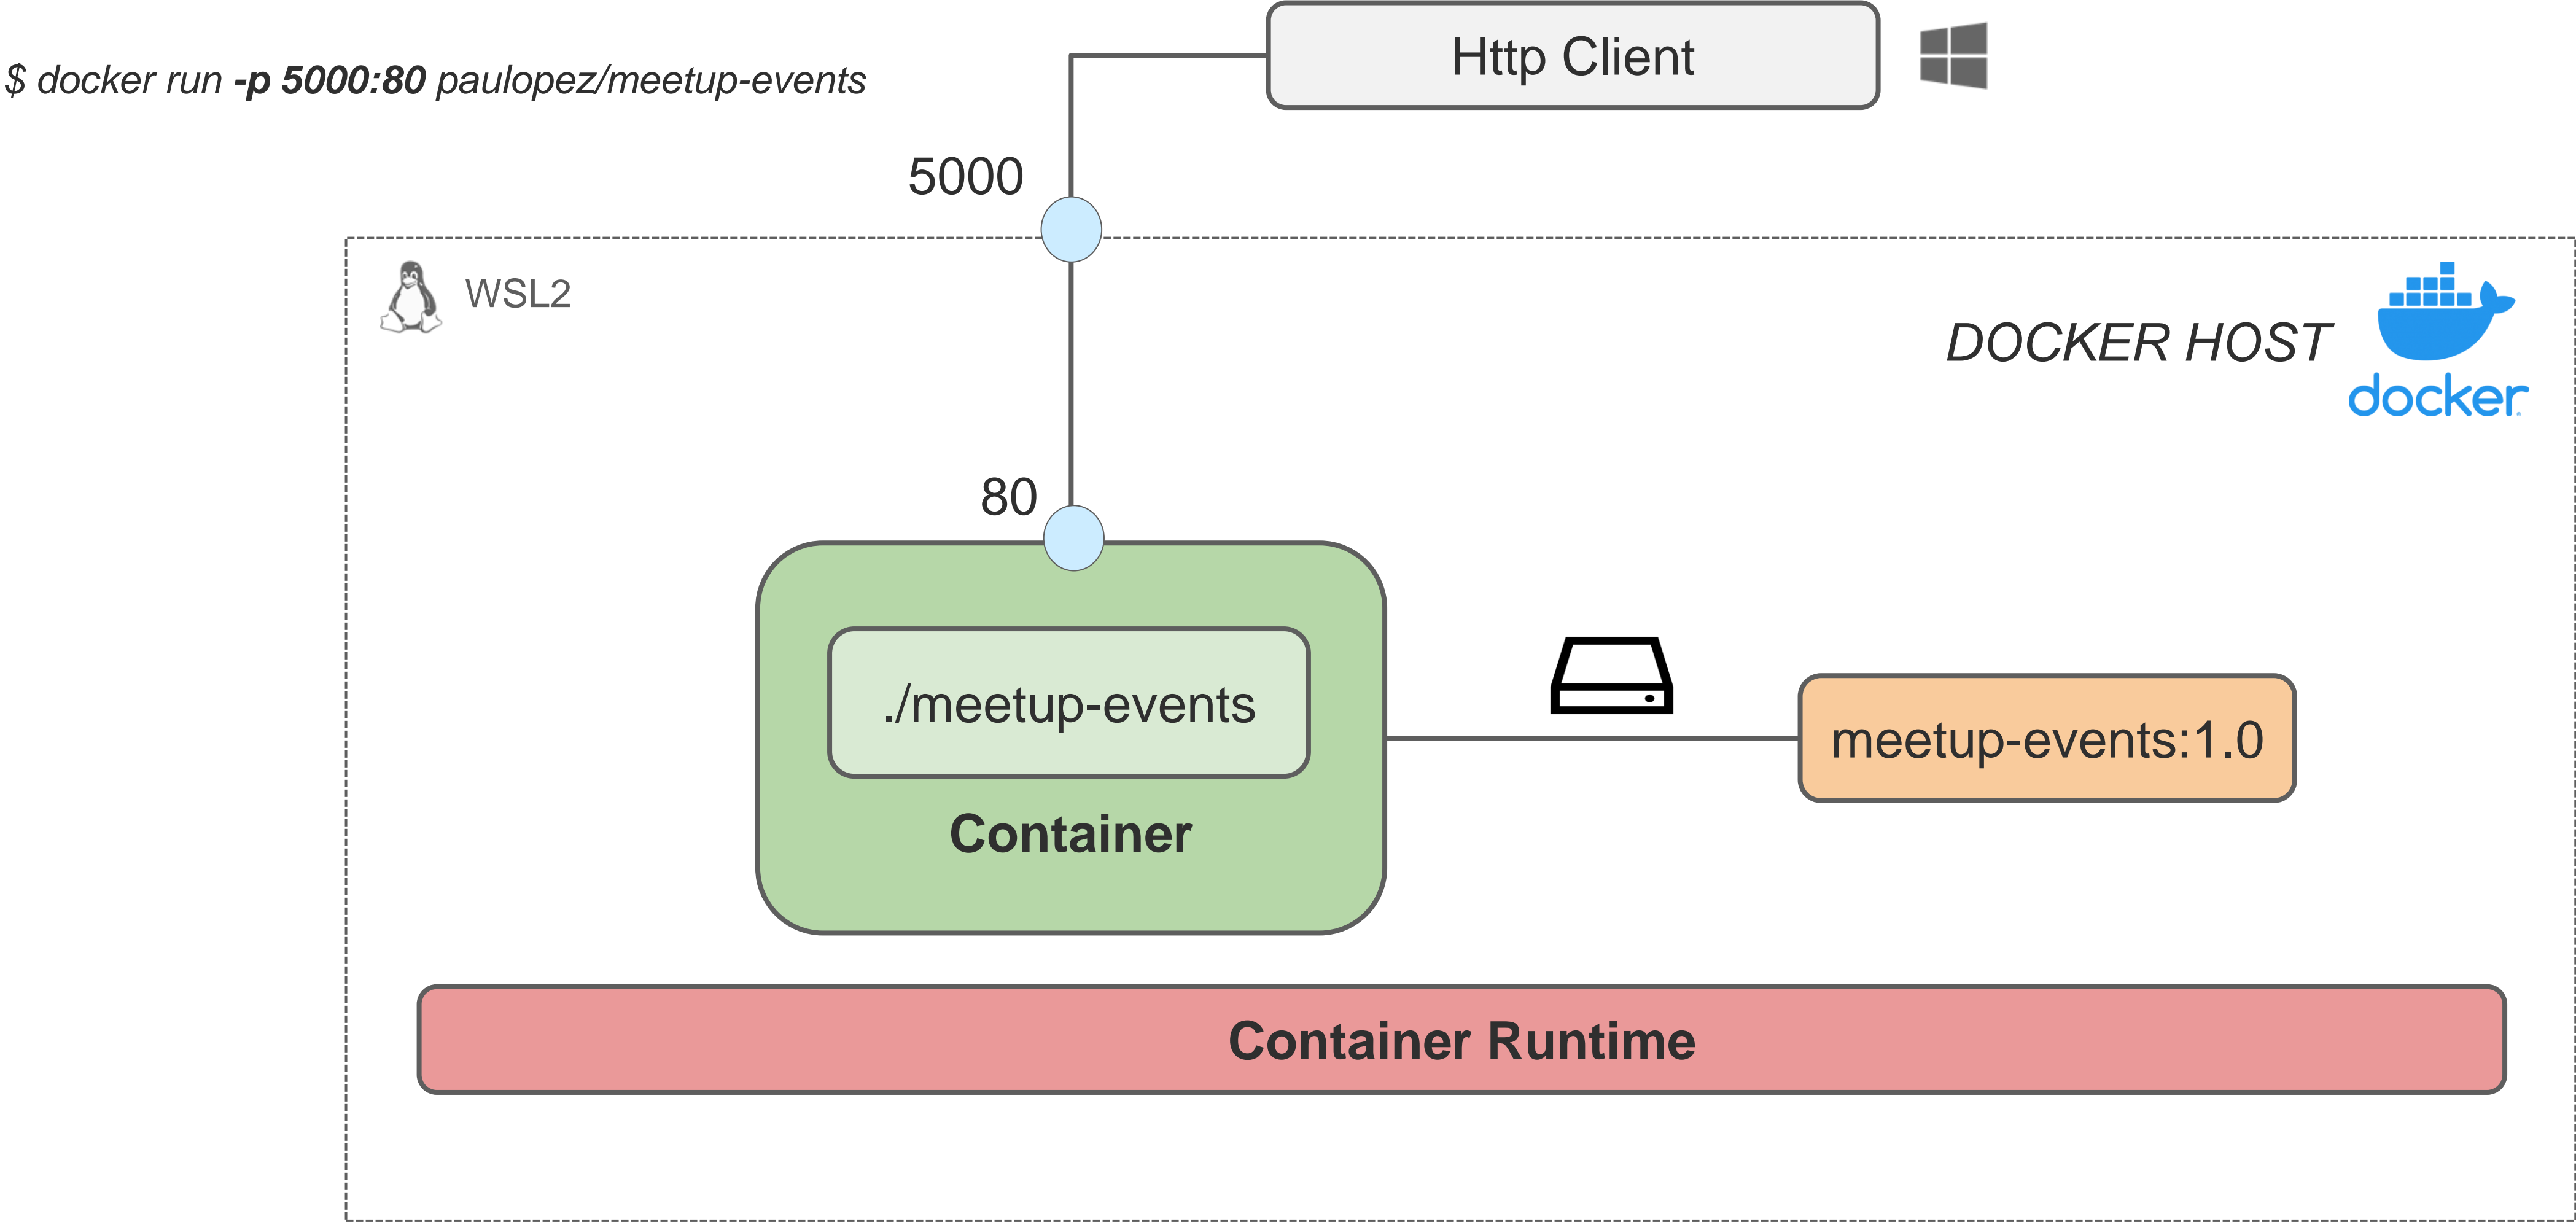

Multistage build with docker

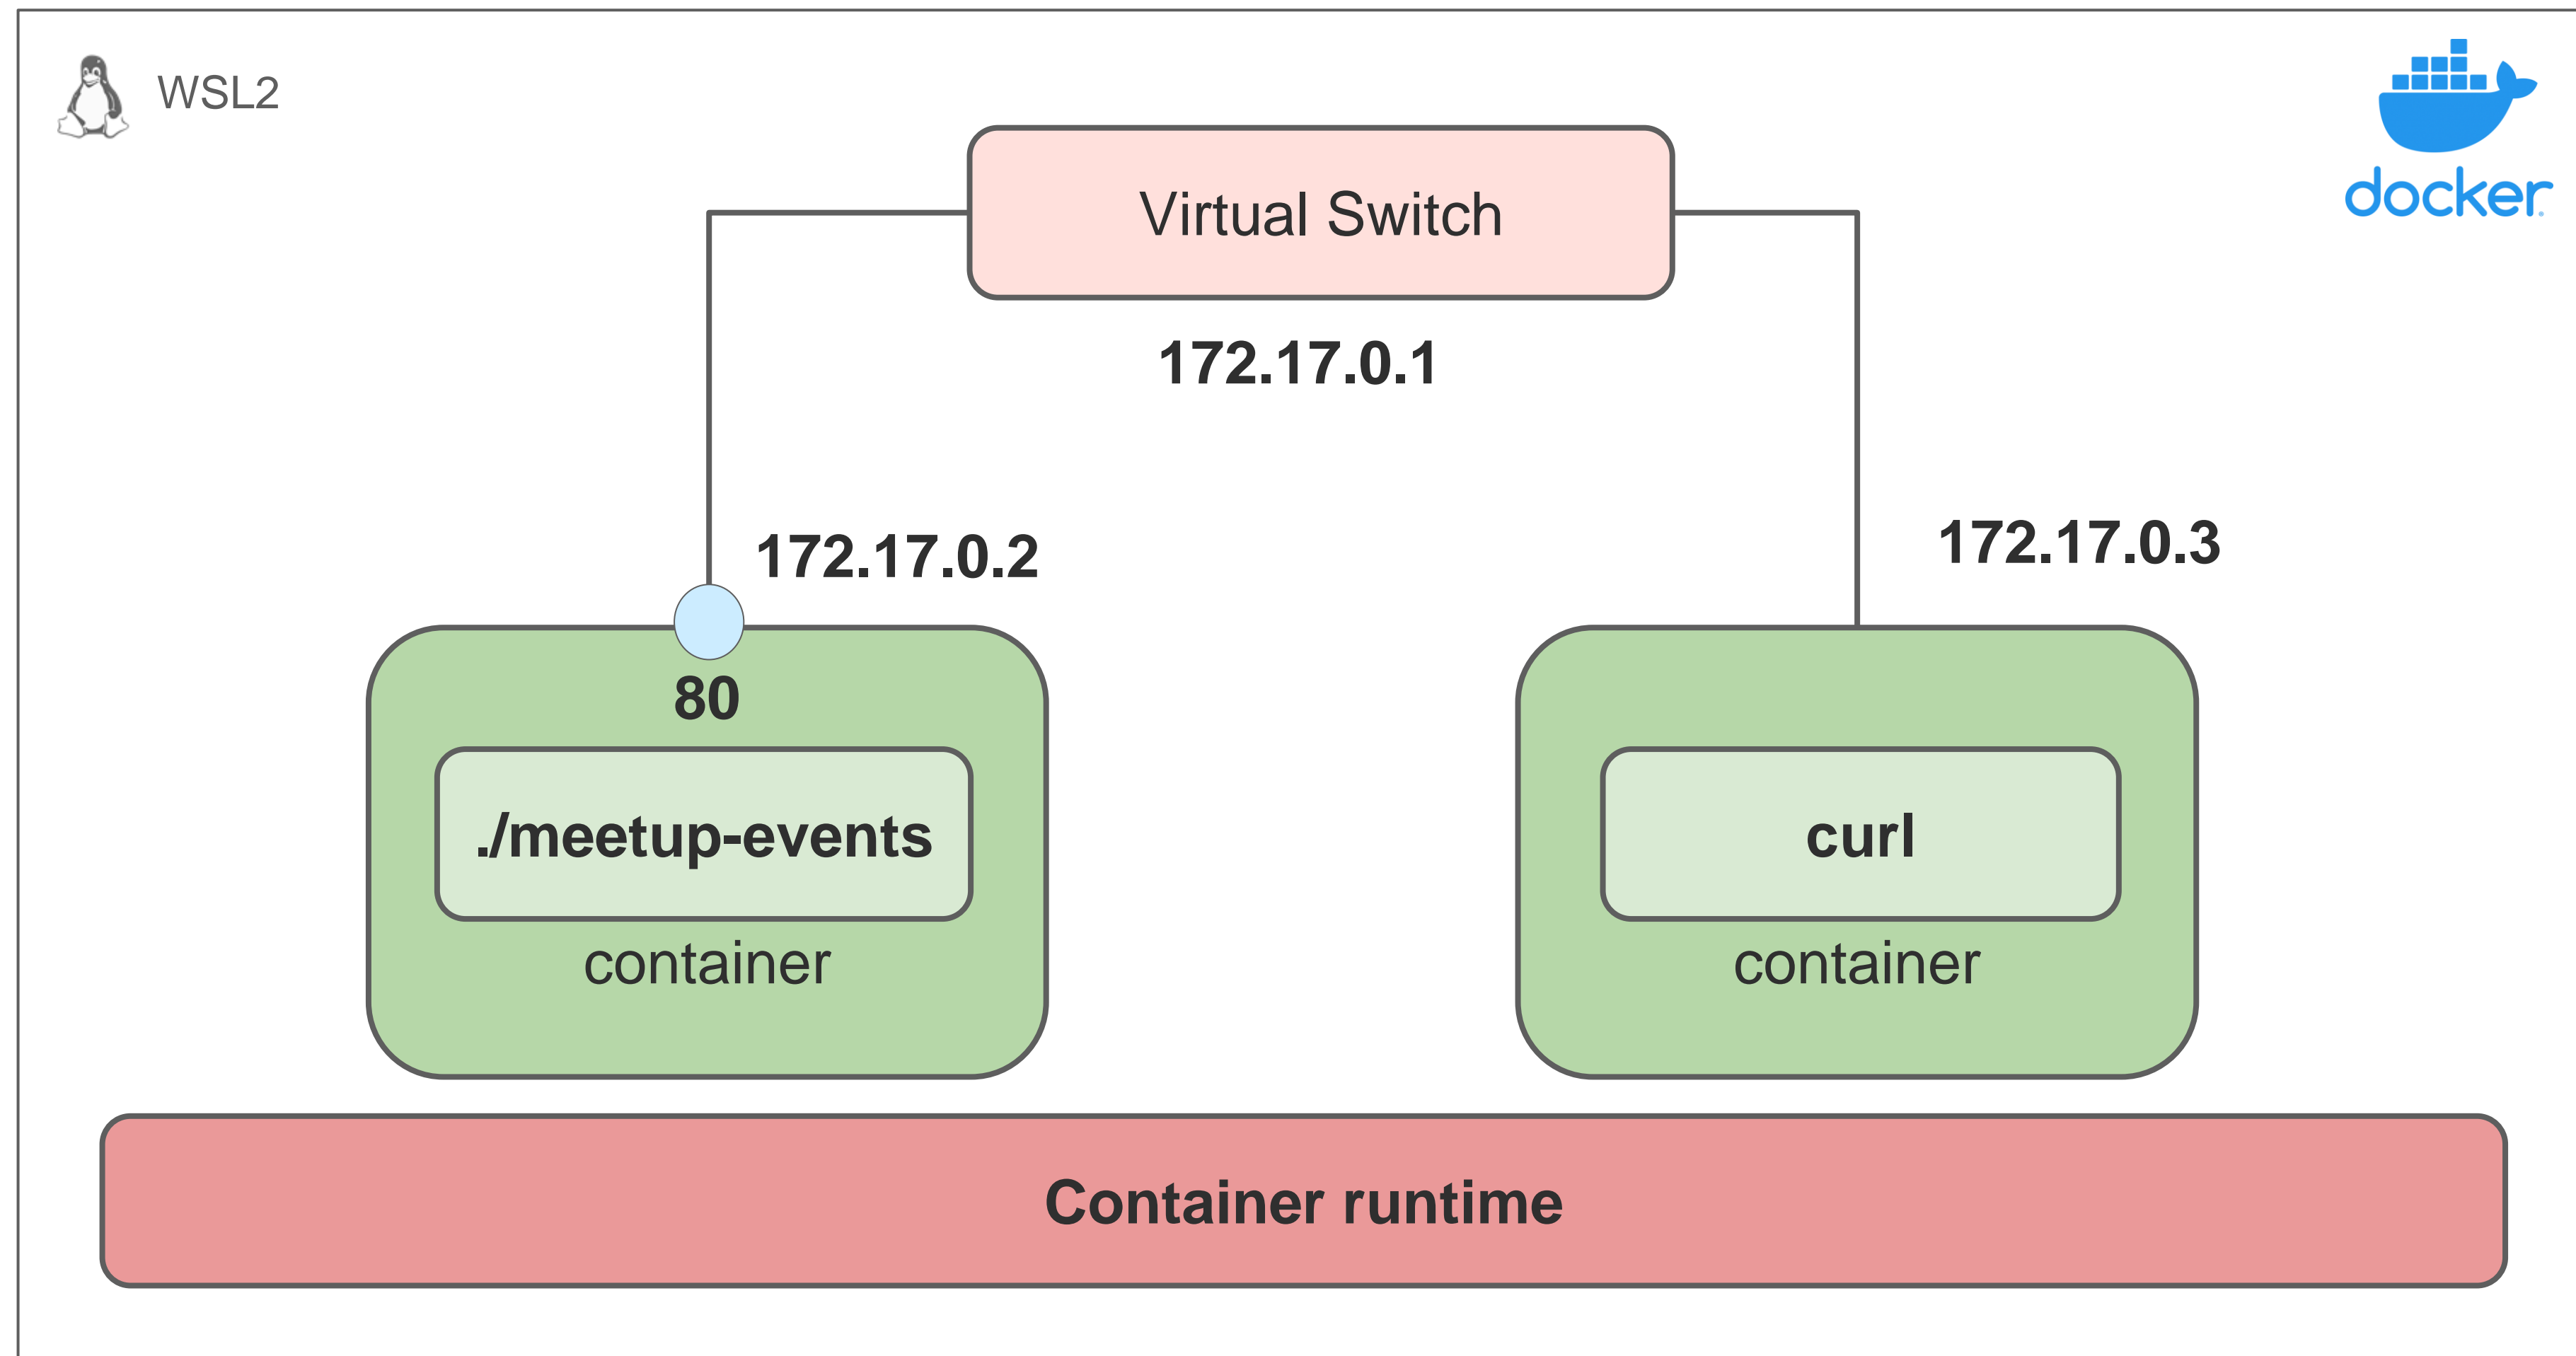

```
$ docker build -f Dockerfile -t paulopez/meetup-events:0.1 ./
```

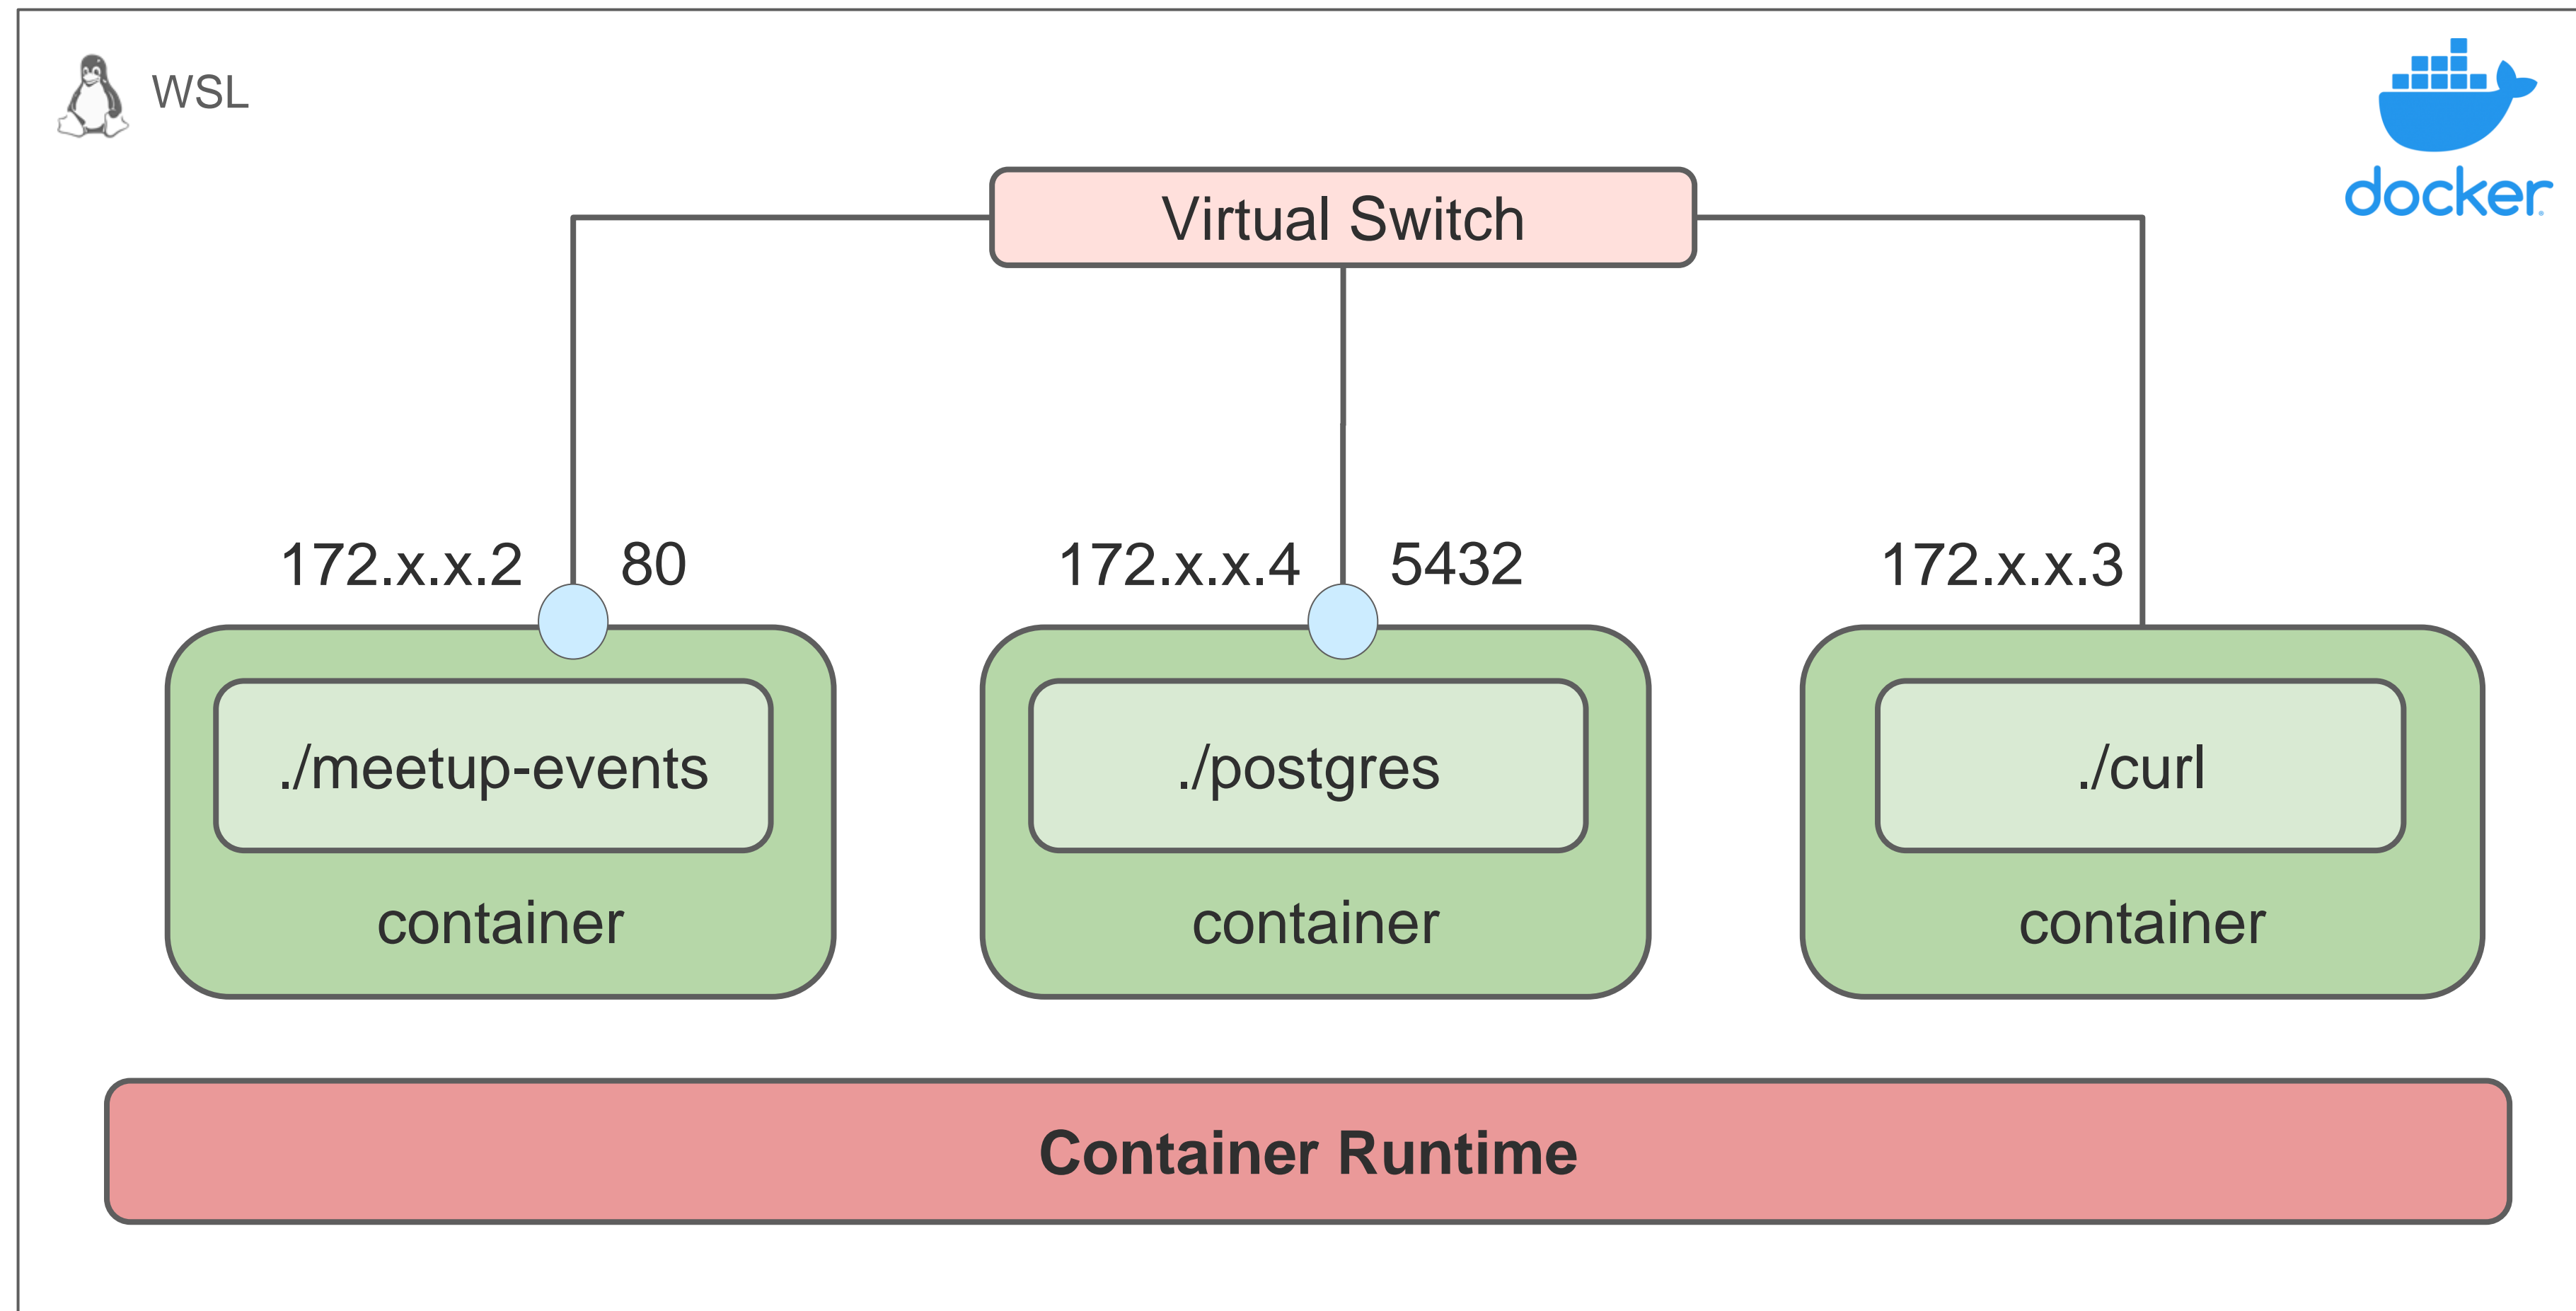

Docker networking

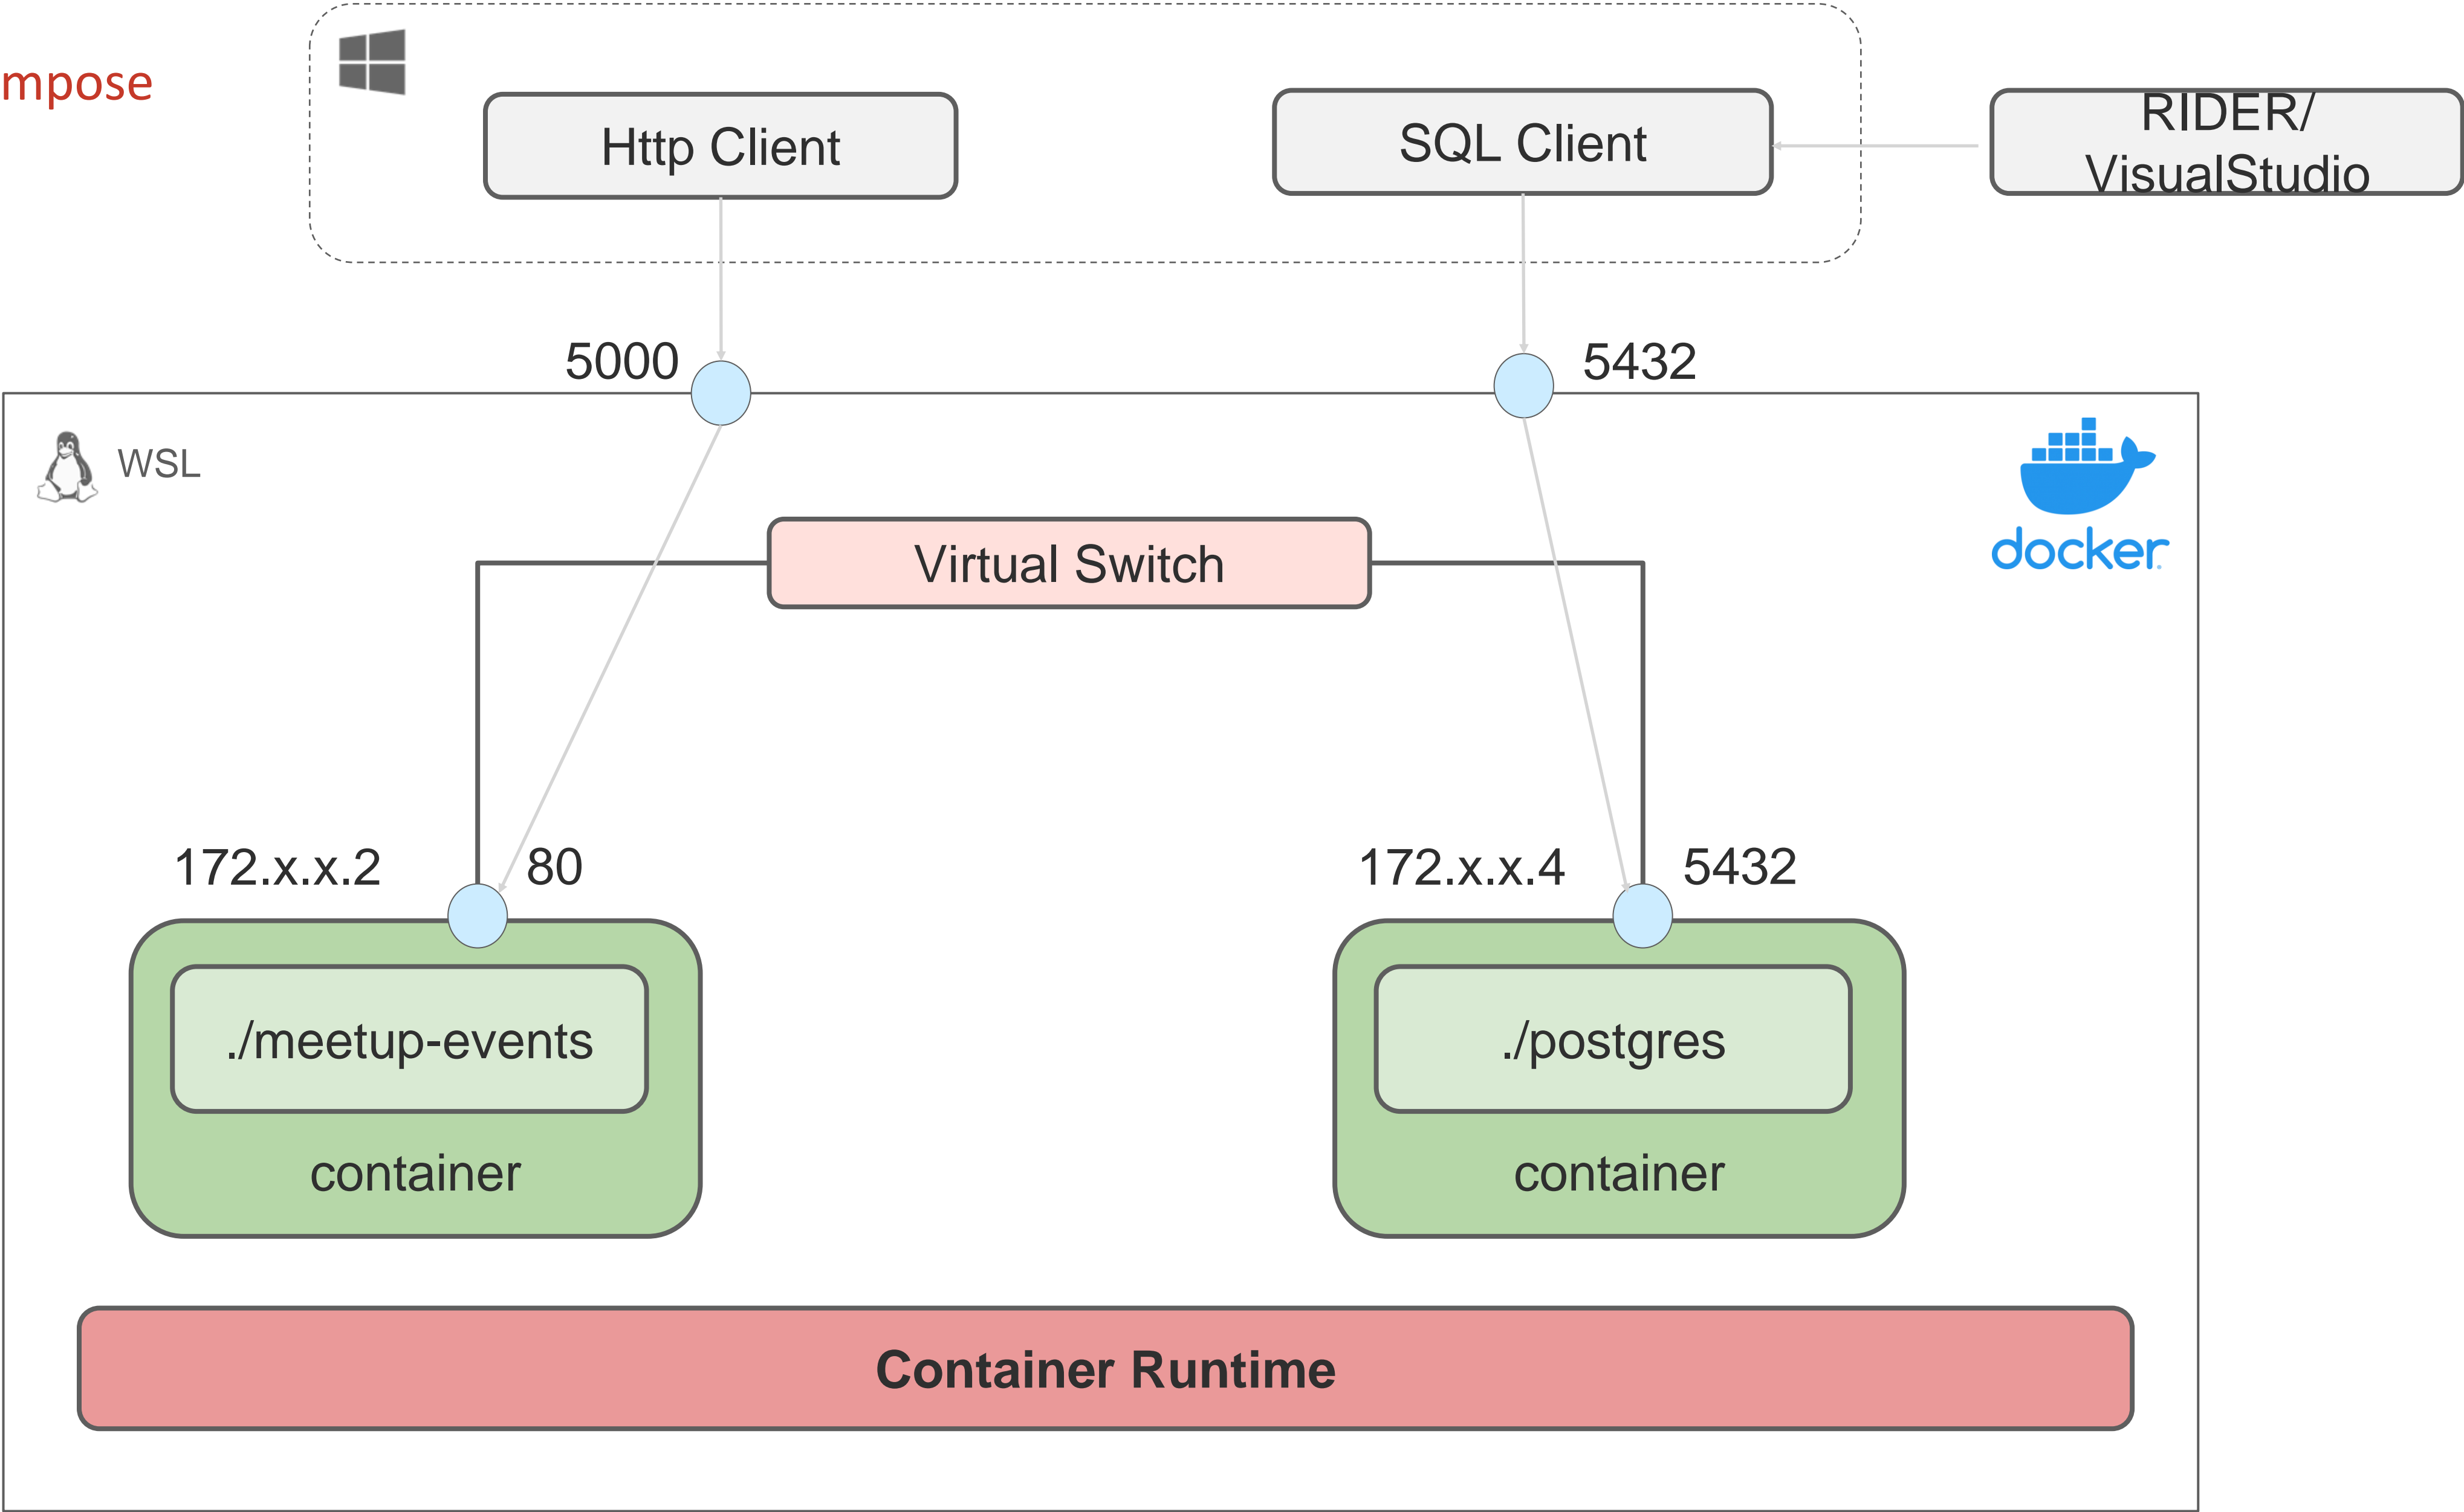

Docker networking

Docker compose

Docker compose

Docker compose
